#### Abstract

In this paper, we made an attempt to study the algebraic nature of anti S-fuzzy subfield of a field.

## Keywords

Fuzzy set,
Anti S-fuzzy subfield,
Pseudo anti S-fuzzy coset.

## Introduction

After the introduction of fuzzy sets by L.A.Zadeh[15], several researchers explored on the generalization of the concept of fuzzy sets. The notion of fuzzy subgroups, anti-fuzzy subgroups, fuzzy fields and fuzzy linear spaces was introduced by Biswas.R[4, 5 ]. In this paper, we introduce the some theorems in anti S-fuzzy subfield of a field.

## Preliminaries:

Definition: Let X be a non-empty set. A fuzzy subset A of X is a function $\mathrm{A}: \mathrm{X} \rightarrow[0,1]$.
Definition: A S-norm is a binary operation $S:[0,1] \times[0,1] \rightarrow[0$, 1] satisfying the following requirements;
(i) $S(0, x)=x, S(1, x)=1$ (boundary condition)
(ii) $S(x, y)=S(y, x)$ (commutativity)
(iii) $S(x, S(y, z))=S(S(x, y), z)$ (associativity)
(iv) if $x \leq y$ and $w \leq z$, then $S(x, w) \leq S(y, z)$ ( monotonicity).

Definition: Let ( $\mathrm{F},+, \cdot$ ) be a field. A fuzzy subset A of F is said to be an anti S-fuzzy subfield ( anti fuzzy subfield with respect to $S$-norm ) of $F$ if the following conditions are satisfied:
(i) $A(x+y) \leq S(A(x), A(y))$, for all $x$ and $y$ in $F$,
(ii) $A(-x) \leq A(x)$, for all $x$ in $F$,
(iii) $A(x y) \leq S(A(x), A(y))$, for all $x$ and $y$ in $F$,
(iv) $\mathrm{A}\left(\mathrm{x}^{-1}\right) \leq \mathrm{A}(\mathrm{x})$, for all $\mathrm{x} \neq 0$ in F , where 0 is the additive identity of $F$.
Definition: Let ( $\mathrm{F},+, \cdot$ ) and ( $\mathrm{F}^{1},+, \cdot$ ) be any two fields. Let $\mathrm{f}: \mathrm{F} \rightarrow \mathrm{F}^{\prime}$ be any function and $A$ be an anti S-fuzzy subfield in $F, V$ be an anti S-fuzzy subfield in $f(F)=F^{1}$, defined by $V(y)$ $=$ inf $A(x)$, for all $x$ in $F$ and $y$ in $F^{\prime}$. Then $A$ is called $a$ $x_{x \in f^{-1}(y)}$
preimage of V under f and is denoted by $\mathrm{f}^{-1}(\mathrm{~V})$.
Definition: Let A and B be any two fuzzy subsets of sets G and $H$, respectively. The anti-product of $A$ and $B$, denoted by $A \times B$, is defined as $A \times B=\{\langle(x, y), A \times B(x, y)\rangle /$ for all $x$ in $G$ and $y$ in $H\}$, where $A \times B(x, y)=\max \{A(x), B(y)\}$, for all $x$ in $G$ and y in H .
Definition: Let A be a fuzzy subset in a set $S$, the antistrongest fuzzy relation on $S$, that is a fuzzy relation on $A$ is $\mathrm{V}=\{\langle(\mathrm{x}, \mathrm{y}), \mathrm{V}(\mathrm{x}, \mathrm{y})\rangle / \mathrm{x}$ and y in S$\}$ given by $\mathrm{V}(\mathrm{x}, \mathrm{y})=\max$ $\{A(x), A(y)\}$, for all $x$ and $y$ in $S$.

Definition: Let A be an anti S-fuzzy subfield of a field (F,,$+ \cdot$ ) and a in F. Then the pseudo anti S-fuzzy coset $(a A)^{p}$ is defined by $\left((a A)^{p}\right)(x)=p(a) A(x)$, for every $x$ in $F$ and for some $p$ in $P$.

## Properties:

Theorem: If A is an anti S -fuzzy subfield of a field ( $\mathrm{F},+, \cdot$ ), then $\mathrm{A}(-\mathrm{x})=\mathrm{A}(\mathrm{x})$, for all x in F and $\mathrm{A}\left(\mathrm{x}^{-1}\right)=\mathrm{A}(\mathrm{x})$, for all $\mathrm{x} \neq 0$ in $F$ and $A(x) \geq A(0)$, for all $x$ in $F$ and $A(x) \geq A(1)$, for all $x$ in $F$, where 0 and 1 are identity elements in $F$.
Proof: For $x$ in $F$ and 0,1 are identity elements in $F$. Now, $A(x)$ $=\mathrm{A}(-(-\mathrm{x})) \leq \mathrm{A}(-\mathrm{x}) \leq \mathrm{A}(\mathrm{x})$. Therefore, $\mathrm{A}(-\mathrm{x})=\mathrm{A}(\mathrm{x})$, for all x in F . And, $\mathrm{A}(\mathrm{x})=\mathrm{A}\left(\left(\mathrm{x}^{-1}\right)^{-1}\right) \leq \mathrm{A}\left(\mathrm{x}^{-1}\right) \leq \mathrm{A}(\mathrm{x})$. Therefore, $\mathrm{A}\left(\mathrm{x}^{-1}\right)$ $=A(x)$, for all $x \neq 0$ in $F$. And, $A(0)=A(x-x) \leq S(A(x), A(-x)$ $)=A(x)$. Therefore, $A(0) \leq A(x)$, for all $x$ in $F$. And, $A(1)=A\left(x^{-1}\right) \leq S\left(A(x), A\left(x^{-1}\right)\right)=A(x)$. Therefore, $A(1) \leq A(x)$, for all $x \neq 0$ in $F$.
Theorem: If A is an anti S-fuzzy subfield of a field (F, +, •), then
(i) $\mathrm{A}(\mathrm{x}-\mathrm{y})=\mathrm{A}(0)$ gives $\mathrm{A}(\mathrm{x})=\mathrm{A}(\mathrm{y})$, for all x and y in F ,
(ii) $\mathrm{A}\left(\mathrm{Xy}^{-1}\right)=\mathrm{A}(1)$ gives $\mathrm{A}(\mathrm{x})=\mathrm{A}(\mathrm{y})$, for all x and $\mathrm{y} \neq 0$ in F , where 0 and 1are identity elements in $F$.
Proof: Let x and y in F and 0,1 are identity elements in F . (i) Now, $A(x)=A(x-y+y) \leq S(A(x-y), A(y))=S(A(0), A(y)$ $)=A(y)=A(x-(x-y)) \leq S(A(x-y), A(x))=S(A(0), A(x))=$ $\mathrm{A}(\mathrm{x})$. Therefore, $\mathrm{A}(\mathrm{x})=\mathrm{A}(\mathrm{y})$, for all x and y in F . (ii) Now, $\mathrm{A}(\mathrm{x})$ $=A\left(x y^{-1} y\right) \leq S\left(A\left(x y^{-1}\right), A(y)\right)=S(A(1), A(y))=A(y)=A($ $\left.\left(x y^{-1}\right)^{-1} x\right) \leq S\left(A\left(x y^{-1}\right), A(x)\right)=S(A(1), A(x))=A(x)$. Therefore, $A(x)=A(y)$, for all $x$ and $y \neq 0$ in $F$.
Theorem: Let A be a Fuzzy subset of a field ( $\mathrm{F},+, \cdot$ ). If $A(e)=A\left(e^{\prime}\right)=0, A(x-y) \leq S(A(x), A(y))$, for all $x$ and $y$ in $F$ and $A\left(x y^{-1}\right) \leq S(A(x), A(y))$, for all $x$ and $y \neq e$ in $F$, then $A$ is an anti S-fuzzy subfield of $F$, where $e$ and $e^{1}$ are identity elements of $F$.
Proof: Let $e$ and $e^{1}$ be identity elements of $F$ and $x$ and $y$ in $F$. Now $A(-x)=A(e-x) \leq S(A(e), A(x))=S(0, A(x))=A(x)$. Therefore, $\mathrm{A}(-\mathrm{x}) \leq \mathrm{A}(\mathrm{x})$, for all x in F . And $\mathrm{A}\left(\mathrm{x}^{-1}\right)=\mathrm{A}\left(\mathrm{e}^{\prime} \mathrm{x}^{-1}\right) \leq$ $\mathrm{S}\left(\mathrm{A}\left(\mathrm{e}^{\prime}\right), \mathrm{A}(\mathrm{x})\right)=\mathrm{S}(0, \mathrm{~A}(\mathrm{x}))=\mathrm{A}(\mathrm{x})$. Therefore, $\mathrm{A}\left(\mathrm{x}^{-1}\right) \leq \mathrm{A}(\mathrm{x})$, for all $x \neq e$ in $F$. And $A(x+y)=A(x-(-y)) \leq S(A(x), A(-y)) \leq$ $S(A(x), A(y))$. Therefore, $A(x+y) \leq S(A(x), A(y))$, for all $x$ and $y$ in $F$. And $A(x y)=A\left(x\left(y^{-1}\right)^{-1}\right) \leq S\left(A(x), A\left(y^{-1}\right)\right) \leq S$

[^0]$(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))$. Therefore, $\mathrm{A}(\mathrm{xy}) \leq \mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))$, for all x and y $\neq e$ in $F$. Hence $A$ is an anti S-fuzzy subfield of $F$.
Theorem: If A is an anti S-fuzzy subfield of a field (F,,$+ \cdot$ ), then $H=\{x / x \in F: A(x)=0\}$ is either empty or is a subfield of F
Proof: If no element satisfies this condition, then H is empty. If $x$ and $y$ in $H$, then $A(x-y) \leq S(A(x), A(-y))=S(A(x), A(y))$ $=S(0,0)=0$. Therefore, $A(x-y)=0$, for all $x$ and $y$ in $F$. We get $x-y$ in $H$. And, $A\left(x y^{-1}\right) \leq S\left(A(x), A\left(y^{-1}\right)\right)=S(A(x), A(y))$ $=S(0,0)=0$. Therefore, $A\left(x y^{-1}\right)=0$, for all $x$ and $y \neq 0$ in $F$. We get $x y^{-1}$ in H. Therefore, H is a subfield of F. Hence H is either empty or is a subfield of $F$.
Theorem: If A is an anti S-fuzzy subfield of a field ( $\mathrm{F},+, \cdot \cdot$ ), then $H=\left\{x \in F: A(x)=A(e)=A\left(e^{\prime}\right)\right\}$ is either empty or is a subfield of $F$, where $e$ and $e^{\prime}$ are identity elements of $F$.
Proof: If no element satisfies this condition, then $H$ is empty. If $x$ and $y$ satisfies this condition, then $A(-x)=A(x)=A(e)$, for all $x$ in $F$ and $A\left(x^{-1}\right)=A(x)=A\left(e^{\prime}\right)$, for all $x \neq e$ in $F$, by Theorem 2.1. Therefore, $A(-x)=A(e)$, for all $x$ in $F$ and $A\left(x^{-1}\right)=A\left(e^{\prime}\right)$, for all $x \neq e$ in $F$. Hence $-x, x^{-1}$ in H. Now, $A(x-y) \leq S(A(x), A(-y$ $)) \leq S(A(x), A(y))=S(A(e), A(e))=A(e)$. Therefore, $A(x-y) \leq A(e)-----------(1) . A n d, A(e)=A((x-y)-(x-y)) \leq$ $S(A(x-y), A(-(x-y))) \leq S(A(x-y), A(x-y))=A(x-y)$. Therefore, $A(e) \leq A(x-y)$-------------------(2). From (1) and (2), we get $A(e)=A(x-y)$, for all $x$ and $y$ in F. Now, $A\left(x y^{-1}\right) \leq$ $\mathrm{S}\left(\mathrm{A}(\mathrm{x}), \mathrm{A}\left(\mathrm{y}^{-1}\right)\right) \leq \mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))=\mathrm{S}\left(\mathrm{A}\left(\mathrm{e}^{\prime}\right), \mathrm{A}\left(\mathrm{e}^{\mathrm{l}}\right)\right)=\mathrm{A}\left(\mathrm{e}^{\mathrm{l}}\right)$.
Therefore, $A\left(x y^{-1}\right) \leq A\left(e^{1}\right)------------(3)$. And, $A\left(e^{1}\right)=A\left(\left(x y^{-}\right.\right.$ $\left.\left.{ }^{1}\right)\left(x y^{-1}\right)^{-1}\right) \quad \leq S\left(A\left(x y^{-1}\right), A\left(\left(x y^{-1}\right)^{-1}\right)\right) \leq S\left(A\left(x y^{-1}\right), A\left(x y^{-}\right.\right.$ $\left.\left.{ }^{1}\right)\right)=A\left(x y^{-1}\right)$. Therefore, $A\left(e^{1}\right) \leq A\left(x y^{-1}\right)-\cdots-------(4)$. From (3) and (4), we get $A\left(e^{\prime}\right)=A\left(x y^{-1}\right)$, for all $x$ and $y \neq e$ in F. Hence $A(e)=A(x-y), A\left(e^{\prime}\right)=A\left(x y^{-1}\right)$. We get $x-y, x y^{-1}$ in H. Hence $H$ is either empty or is a subfield of $F$.
Theorem: Let A be an anti S-fuzzy subfield of a field ( $\mathrm{F},+, \cdot$ ). Then (i) if $A(x-y)=0$, then $A(x)=A(y)$, for $x$ and $y$ in $F$ (ii) if $A\left(x y^{-1}\right)=0$, then $A(x)=A(y)$, for all $x$ and $y \neq e$ in $F$, where $e$ and $e^{\prime}$ are identity elements of $F$.
Proof: Let $x$ and $y$ in $F$. Now, $A(x)=A(x-y+y) \leq S(A(x-y)$, $\mathrm{A}(\mathrm{y}))=\mathrm{S}(0, \mathrm{~A}(\mathrm{y}))=\mathrm{A}(\mathrm{y})=\mathrm{A}(-\mathrm{y})=\mathrm{A}(-\mathrm{x}+\mathrm{x}-\mathrm{y}) \leq \mathrm{S}(\mathrm{A}(-\mathrm{x})$, $\mathrm{A}(\mathrm{x}-\mathrm{y}) \mathrm{)}=\mathrm{S}(\mathrm{A}(-\mathrm{x}), 0)=\mathrm{A}(-\mathrm{x})=\mathrm{A}(\mathrm{x})$. Therefore, $\mathrm{A}(\mathrm{x})=\mathrm{A}(\mathrm{y})$, for all $x$ and $y$ in $F$. And, $A(x)=A\left(x y^{-1} y\right) \leq S\left(A\left(x y^{-1}\right), A(y)\right)$ $=S(0, A(y))=A(y)=A\left(y^{-1}\right)=A\left(x^{-1} x^{-1}\right) \leq S\left(A\left(x^{-1}\right), A\left(x^{-1}\right)\right.$ $)=S\left(A\left(x^{-1}\right), 0\right)=A\left(x^{-1}\right)=A(x)$. Therefore, $A(x)=A(y)$, for all $x \neq e$ and $y \neq e$ in $F$.
Theorem: If A is an anti S-fuzzy subfield of a field (F,,$+ \cdot$ ), then (i) if $A(x-y)=1$, then either $A(x)=1$ or $A(y)=1$, for $x$ and $y$ in $F$,
(ii) if $\mathrm{A}\left(\mathrm{xy}^{-1}\right)=1$, then either $\mathrm{A}(\mathrm{x})=1$ or $\mathrm{A}(\mathrm{y})=1$, for all x and $y \neq e$ in $F$.
Proof: Let $x$ and $y$ in $F$. By the definition $A(x-y) \leq S(A(x)$, $A(y))$, which implies that $1 \leq S(A(x), A(y))$. Therefore, either $A(x)=1$ or $A(y)=1$, for all $x$ and $y$ in $F$. And by the definition $A\left(x y^{-1}\right) \leq S(A(x), A(y))$, which implies that $1 \leq S(A(x), A(y))$. Therefore, either $A(x)=1$ or $A(y)=1$, for all $x$ and $y \neq e$ in $F$.
Theorem: Let $(\mathrm{F},+, \cdot)$ be a field. If A is an anti S-fuzzy subfield of $F$, then $A(x+y)=S(A(x), A(y))$, for all $x$ and $y$ in $F$ and $A(x y)=S(A(x), A(y))$, for all $x \neq 0$ and $y$ in $F$ with $A(x) \neq$ A(y).
Proof: Let $x$ and $y$ belongs to F. Assume that $A(x)<A(y)$. Now, $\mathrm{A}(\mathrm{y})=\mathrm{A}(-\mathrm{x}+\mathrm{x}+\mathrm{y}) \leq \mathrm{S}(\mathrm{A}(-\mathrm{x}), \mathrm{A}(\mathrm{x}+\mathrm{y})) \leq \mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{x}+\mathrm{y}))=$ $A(x+y) \leq S(A(x), A(y))=A(y)$. Therefore, $A(x+y)=A(y)=S($ $A(x), A(y))$, for all $x$ and $y$ in $F$. And, $A(y)=A\left(x^{-1} x y\right) \leq S\left(A\left(x^{-}\right.\right.$
$\left.\left.{ }^{1}\right), A(x y)\right) \leq S(A(x), A(x y))=A(x y) \leq S(A(x), A(y))$ $=A(y)$. Therefore, $A(x y)=A(y)=S(A(x), A(y))$, for all $x \neq 0$ and $y$ in $F$.
Theorem: If A and B are any two anti S-fuzzy subfields of a field ( $\mathrm{F},+, \cdot$ ), then $A \cup B$ is an anti $S$-fuzzy subfield of $F$.
Proof: Let $x$ and $y$ belongs to $F$ and $A=\{\langle x, A(x)\rangle / x \in F\}$ and $B=\{\langle x, B(x)\rangle / x \in F\}$. Let $C=A \cup B$ and $C=\{\langle x, C(x)\rangle / x \in F$ $\}, \mathrm{C}(\mathrm{x})=\max \{\mathrm{A}(\mathrm{x}), \mathrm{B}(\mathrm{x})\}$. (i) $\mathrm{C}(\mathrm{x}-\mathrm{y})=\max \{\mathrm{A}(\mathrm{x}-\mathrm{y}), \mathrm{B}(\mathrm{x}-\mathrm{y})$ $\} \leq \max \{\mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y})), \mathrm{S}(\mathrm{B}(\mathrm{x}), \mathrm{B}(\mathrm{y}))\}=\mathrm{S}(\max \{\mathrm{A}(\mathrm{x}), \mathrm{B}(\mathrm{x})$ $\}, \max \{\mathrm{A}(\mathrm{y}), \mathrm{B}(\mathrm{y})\})=\mathrm{S}(\mathrm{C}(\mathrm{x}), \mathrm{C}(\mathrm{y}))$. Therefore, $\mathrm{C}(\mathrm{x}-\mathrm{y}) \leq \mathrm{S}($ $C(x), C(y))$, for all $x$ and $y$ in $F$. (ii) $C\left(x y^{-1}\right)=\max \left\{A\left(x y^{-1}\right)\right.$, $\left.B\left(x y^{-1}\right)\right\} \leq \max \{S(A(x), A(y)), S(B(x), B(y))\}=S(\max \{$ $A(x), B(x)\}, \max \{A(y), B(y)\})=S(C(x), C(y))$. Therefore, $C\left(x y^{-1}\right) \leq S(C(x), C(y))$, for all $x$ and $y \neq 0$ in $F$. Hence $A \cup B$ is an anti S-fuzzy subfield of a field $F$.
Theorem: The union of a family of anti S-fuzzy subfields of a field ( $\mathrm{F},+, \cdot \cdot$ ) is an anti $S$-fuzzy subfield of F .
Proof: Let $\left\{A_{i}\right\}_{i \in I}$ be a family of anti S-fuzzy subfields of a field F and $\mathrm{A}=\bigcup_{i \in I} \mathrm{~A}_{i}$. Then for x and y belongs to F , we have (i) $\mathrm{A}(\mathrm{x}-\mathrm{y})=\sup _{i \in I} \mathrm{~A}_{\mathrm{i}}(x-y) \leq \sup _{i \in I} \mathrm{~S}\left(\mathrm{~A}_{\mathrm{i}}(x), \mathrm{A}_{\mathrm{i}}(y)\right) \leq \mathrm{S}($ $\left.\operatorname{Sup}_{i \in I}\left(A_{i}(x)\right), \sup _{i \in I}\left(A_{i}(y)\right)^{i \in I}\right)=\mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))$. Therefore, $\mathrm{A}(\mathrm{x}-\mathrm{y}) \leq \mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y})$ ), for all x and y in F . (ii) $\mathrm{A}\left(\mathrm{xy}^{-1}\right)=\sup _{i \in I} A_{i}\left(x y^{-1}\right) \leq \sup _{i \in I} \mathrm{~S}\left(A_{i}(x), A_{i}(y)\right) \leq$ $\mathrm{S}\left(\sup _{i \in I}\left(A_{i}(x)\right), \sup _{i \in I}\left(A_{i}(y)\right)\right)=\mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))$. Therefore, $A\left(x y^{-1}\right) \leq S(A(x), A(y))$, for all $x$ and $y \neq 0$ in $F$. Hence the union of a family of anti S-fuzzy subfields of a field $F$ is an anti $S$-fuzzy subfield of $F$.
Theorem: Let A be an anti S-fuzzy subfield of a field (F, +, • ). If $A(x)>A(y)$, for some $x$ and $y$ in $F$, then $A(x+y)=A(x)=$ $A(y+x)$, for all $x$ and $y$ in $F$ and $A(x y)=A(x)=A(y x)$, for all $x$ and $y \neq 0$ in $F$.
Proof: Let A be an anti S-fuzzy subfield of a field F. Also we have $A(x)>A(y)$, for some $x$ and $y$ in F, Now, $A(x+y) \leq S($ $\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))=\mathrm{A}(\mathrm{x})$; and $\mathrm{A}(\mathrm{x})=\mathrm{A}(\mathrm{x}+\mathrm{y}-\mathrm{y}) \leq \mathrm{S}(\mathrm{A}(\mathrm{x}+\mathrm{y}), \mathrm{A}(-\mathrm{y})$ $) \leq S(A(x+y), A(y))=A(x+y)$. Therefore, $A(x+y)=A(x)$, for all $x$ and $y$ in $F$. Hence $A(x+y)=A(x)=A(y+x)$, for all $x$ and $y$ in $F$. Now, $A(x y) \leq S(A(x), A(y))=A(x)$; and $A(x)=A\left(x y y^{-1}\right)$ $\leq \mathrm{S}\left(\mathrm{A}(\mathrm{xy}), \mathrm{A}\left(\mathrm{y}^{-1}\right)\right) \leq \mathrm{S}(\mathrm{A}(\mathrm{xy}), \mathrm{A}(\mathrm{y}))=\mathrm{A}(\mathrm{xy})$. Therefore, $\mathrm{A}(\mathrm{xy})$ $=A(x)$, for all $x$ and $y \neq 0$ in $F$. Hence $A(x y)=A(x)=A(y x)$, for all $x$ and $y \neq 0$ in $F$.
Theorem: Let A be an anti S-fuzzy subfield of a field ( $\mathrm{F},+, \cdot$ ). If $A(x)<A(y)$, for some $x$ and $y$ in $F$, then $A(x+y)=A(y)=$ $A(y+x)$, for all $x$ and $y$ in $F$ and $A(x y)=A(y)=A(y x)$, for all $x$ and $y \neq 0$ in $F$.
Proof: It is trivial.
Theorem: Let A be an anti S-fuzzy subfield of a field ( $\mathrm{F},+, \cdot$ ) such that $\operatorname{Im} A=\{\alpha\}$, where $\alpha$ in $L$. If $A=B \cap C$, where $B$ and $C$ are anti S-fuzzy subfields of F , then either $\mathrm{B} \subseteq \mathrm{C}$ or $\mathrm{C} \subseteq \mathrm{B}$.
Proof: It is trivial.
Theorem: If A and B are anti S-fuzzy subfields of the fields G and $H$, respectively, then the anti-product $A \times B$ is an anti $S$ fuzzy subfield of $G \times H$. Proof: Let A and B be anti S-fuzzy subfields of the fields $G$ and $H$ respectively. Let $x_{1}$ and $x_{2}$ be in G, $y_{1}$ and $y_{2}$ be in $H$. Then $\left(x_{1}, y_{1}\right)$ and $\left(x_{2}, y_{2}\right)$ are in $G \times H$. Now, $A \times B\left[\left(x_{1}, y_{1}\right)-\left(x_{2}, y_{2}\right)\right]=A \times B\left(x_{1}-x_{2}, y_{1}-y_{2}\right)=$ $\max \left(A\left(x_{1}-x_{2}\right), B\left(y_{1}-y_{2}\right)\right) \leq \max \left(S\left(A\left(x_{1}\right), A\left(x_{2}\right)\right), S(\right.$
$\left.\left.B\left(y_{1}\right), B\left(y_{2}\right)\right)\right)=S\left(\max \left(A\left(x_{1}\right), B\left(y_{1}\right)\right), \max \left(A\left(x_{2}\right), B\left(y_{2}\right)\right)\right)$ $=S\left(A \times B\left(x_{1}, y_{1}\right), A \times B\left(x_{2}, y_{2}\right)\right)$.
Therefore, $\mathrm{A} \times \mathrm{B}\left[\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right)-\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right] \leq \mathrm{S}\left(\mathrm{A} \times \mathrm{B}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), \mathrm{A} \times \mathrm{B}\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right.$ ), for all $x_{1}$ and $x_{2}$ in $G$ and $y_{1}$ and $y_{2}$ in H. And, $A \times B\left[\left(x_{1}\right.\right.$, $\left.\left.y_{1}\right)\left(x_{2}, y_{2}\right)^{-1}\right]=A \times B\left(x_{1} x_{2}{ }^{-1}, y_{1} y_{2}{ }^{-1}\right)=\max \left(A\left(x_{1} x_{2}{ }^{-1}\right), B\left(y_{1} y_{2}{ }^{-1}\right)\right) \leq$ $\max \left(S\left(A\left(x_{1}\right), A\left(x_{2}\right)\right), S\left(B\left(y_{1}\right), B\left(y_{2}\right)\right)\right)=S\left(\max \left(A\left(x_{1}\right), B\left(y_{1}\right)\right.\right.$ $)$, max $\left.\left(A\left(x_{2}\right), B\left(y_{2}\right)\right)\right)=S\left(A \times B\left(x_{1}, y_{1}\right), A \times B\left(x_{2}, y_{2}\right)\right)$.
Therefore, $A \times B\left[\left(x_{1}, y_{1}\right)\left(x_{2}, y_{2}\right)^{-1}\right] \leq S\left(A \times B\left(x_{1}, y_{1}\right), A \times B\left(x_{2}\right.\right.$, $y_{2}$ ) ), for all $x_{1}$ and $x_{2} \neq 0$ in $G$ and $y_{1}$ and $y_{2} \neq 0^{1}$ in H. Hence anti-product $\mathrm{A} \times \mathrm{B}$ is an anti S -fuzzy subfield of $\mathrm{G} \times \mathrm{H}$.
Theorem: Let A and B be fuzzy subsets of the fields G and H, respectively. Suppose that 0,1 and $0^{\prime}, 1^{\prime}$ are the identity elements of $G$ and $H$, respectively. If the anti-product $A \times B$ is an anti $S$ fuzzy subfield of $\mathrm{G} \times \mathrm{H}$, then at least one of the following two statements must hold.
(i) $\mathrm{B}\left(0^{\prime}\right) \leq \mathrm{A}(\mathrm{x})$, for all x in G and $\mathrm{B}\left(1^{\prime}\right) \leq \mathrm{A}(\mathrm{x})$, for all $\mathrm{x} \neq 0$ in G ,
(ii) $\mathrm{A}(0) \leq \mathrm{B}(\mathrm{y})$, for all y in H and $\mathrm{A}(1) \leq \mathrm{B}(\mathrm{y})$, for all $\mathrm{y} \neq 0^{\prime}$ in H.

Proof: Let the anti-product $A \times B$ be an anti $S$-fuzzy subfield of $\mathrm{G} \times \mathrm{H}$. By contraposition, suppose that none of the statements (i) and (ii) holds. Then we can find a in G and b in H such that $\mathrm{A}(\mathrm{a})$ $<\mathrm{B}\left(0^{\prime}\right), \mathrm{A}(\mathrm{a})<\mathrm{B}\left(1^{\prime}\right)$ and $\mathrm{B}(\mathrm{b})<\mathrm{A}(0), \mathrm{B}(\mathrm{b})<\mathrm{A}(1)$. We have, $\mathrm{A} \times \mathrm{B}(\mathrm{a}, \mathrm{b})=\max (\mathrm{A}(\mathrm{a}), \mathrm{B}(\mathrm{b}))<\max \left(\mathrm{A}(0), \mathrm{B}\left(0^{\prime}\right)\right)=\mathrm{A} \times \mathrm{B}(0$, $\left.0^{\prime}\right)$. And, $\mathrm{A} \times \mathrm{B}(\mathrm{a}, \mathrm{b})=\max (\mathrm{A}(\mathrm{a}), \mathrm{B}(\mathrm{b}))<\max \left(\mathrm{A}(1), \mathrm{B}\left(1^{\prime}\right)\right)=$ $\mathrm{A} \times \mathrm{B}\left(1,1^{\mathrm{l}}\right)$. Thus anti-product $\mathrm{A} \times \mathrm{B}$ is not an anti S-fuzzy subfield of $G \times H$. Hence either $B\left(0^{\prime}\right) \leq A(x)$, for all $x$ in $G$ and $\mathrm{B}\left(1^{\prime}\right) \leq \mathrm{A}(\mathrm{x})$, for all $\mathrm{x} \neq 0$ in G or $\mathrm{A}(0) \leq \mathrm{B}(\mathrm{y})$, for all y in H and $\mathrm{A}(1) \leq \mathrm{B}(\mathrm{y})$, for all $\mathrm{y} \neq 0^{\prime}$ in H .
Theorem: Let A and B be fuzzy subsets of the fields G and H, respectively and the anti-product $\mathrm{A} \times \mathrm{B}$ is an anti S-fuzzy subfield of $\mathrm{G} \times \mathrm{H}$. Then the following are true:
(i) if $\mathrm{A}(\mathrm{x}) \geq \mathrm{B}\left(0^{\prime}\right), \mathrm{A}(\mathrm{x}) \geq \mathrm{B}\left(1^{\prime}\right)$, then A is an anti S-fuzzy subfield of $G$.
(ii) if $\mathrm{B}(\mathrm{x}) \geq \mathrm{A}(0), \mathrm{B}(\mathrm{x}) \geq \mathrm{A}(1)$, then B is an anti S -fuzzy subfield of H .
(iii) either A is an anti S-fuzzy subfield of G or B is an anti Sfuzzy subfield of $H$, where 0,1 and $0^{\prime}, 1^{\prime}$ are the identity elements of $G$ and $H$, respectively.
Proof: Let the anti-product $A \times B$ be an anti $S$-fuzzy subfield of $G \times H$ and $x, y$ in $G$. Then $\left(x, 0^{\prime}\right),\left(x, 1^{\prime}\right)$ and $\left(y, 0^{\prime}\right),\left(y, 1^{\prime}\right)$ are in $G \times H$. Now, using the property $A(x) \geq B\left(0^{\prime}\right), A(x) \geq B\left(1^{\prime}\right)$, for all $x$ in G , we get, $\mathrm{A}(\mathrm{x}-\mathrm{y})=\max \left(\mathrm{A}(\mathrm{x}-\mathrm{y}), \mathrm{B}\left(0^{\prime}+0^{\prime}\right)\right)=\mathrm{A} \times \mathrm{B}((\mathrm{x}-\mathrm{y})$, $\left.\left(0^{\prime}+0^{\prime}\right)\right)=\mathrm{A} \times \mathrm{B}\left[\left(\mathrm{x}, 0^{\prime}\right)+\left(-\mathrm{y}, 0^{\prime}\right)\right] \leq \mathrm{S}\left(\mathrm{A} \times \mathrm{B}\left(\mathrm{x}, 0^{\prime}\right), \mathrm{A} \times \mathrm{B}\left(-\mathrm{y}, 0^{\prime}\right)\right)$ $=\mathrm{S}\left(\max \left(\mathrm{A}(\mathrm{x}), \mathrm{B}\left(0^{\prime}\right)\right), \max \left(\mathrm{A}(-\mathrm{y}), \mathrm{B}\left(0^{\prime}\right)\right)\right)=\mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(-\mathrm{y}))$ $\leq \mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))$. Therefore, $\mathrm{A}(\mathrm{x}-\mathrm{y}) \leq \mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))$, for all x and y in G. And, $\mathrm{A}\left(\mathrm{xy}^{-1}\right)=\max \left(\mathrm{A}\left(\mathrm{xy}^{-1}\right), \mathrm{B}\left(1^{\prime} 1^{\prime}\right)\right)=\mathrm{A} \times \mathrm{B}\left(\left(\mathrm{xy}^{-1}\right)\right.$, $\left.\left(1^{\prime} 1^{\prime}\right)\right)=A \times B\left[\left(x, 1^{\prime}\right)\left(y^{-1}, 1^{\prime}\right)\right] \leq S\left(A \times B\left(x, 1^{\prime}\right), A \times B\left(y^{-1}, 1^{\prime}\right)\right)=$ $\mathrm{S}\left(\max \left(\mathrm{A}(\mathrm{x}), \mathrm{B}\left(1^{\prime}\right)\right), \max \left(\mathrm{A}\left(\mathrm{y}^{-1}\right), \mathrm{B}\left(1^{\prime}\right)\right)\right)=\mathrm{S}\left(\mathrm{A}(\mathrm{x}), \mathrm{A}\left(\mathrm{y}^{-1}\right)\right) \leq$ $S(A(x), A(y))$. Therefore, $A\left(x y^{-1}\right) \leq S(A(x), A(y))$, for all $x$ and $y \neq 0$ in G. Hence A is an anti S-fuzzy subfield of G. Thus (i) is proved. Now, using the property $\mathrm{B}(\mathrm{x}) \geq \mathrm{A}(0)$, for all x in $H$ and $B(x) \geq A(1)$, for all $x \neq 0^{1}$ in $H$, we get, $B(x-y)=\max ($ $\mathrm{B}(\mathrm{x}-\mathrm{y}), \mathrm{A}(0+0))=\mathrm{A} \times \mathrm{B}((0+0),(\mathrm{x}-\mathrm{y}))=\mathrm{A} \times \mathrm{B}[(0, \mathrm{x})+(0,-\mathrm{y})]$ $\leq \mathrm{S}(\mathrm{A} \times \mathrm{B}(0, \mathrm{x}), \mathrm{A} \times \mathrm{B}(0,-\mathrm{y}))=\mathrm{S}(\max (\mathrm{A}(0), \mathrm{B}(\mathrm{x})), \max ($ $\mathrm{A}(0), \mathrm{B}(-\mathrm{y})))=\mathrm{S}(\mathrm{B}(\mathrm{x}), \mathrm{B}(-\mathrm{y})) \leq \mathrm{S}(\mathrm{B}(\mathrm{x}), \mathrm{B}(\mathrm{y}))$. Therefore, $B(x-y) \leq S(B(x), B(y))$, for all $x$ and $y$ in H. And, $B\left(x y^{-1}\right)=$ $\max \left(\mathrm{B}\left(\mathrm{xy}^{-1}\right), \mathrm{A}(1.1)\right)=\mathrm{A} \times \mathrm{B}\left((1.1),\left(\mathrm{xy}^{-1}\right)\right)=\mathrm{A} \times \mathrm{B}[(1, \mathrm{x})(1$, $\left.\left.\mathrm{y}^{-1}\right)\right] \leq \mathrm{S}\left(\mathrm{A} \times \mathrm{B}(1, \mathrm{x}), \mathrm{A} \times \mathrm{B}\left(1, \mathrm{y}^{-1}\right)\right)=\mathrm{S}(\max (\mathrm{A}(1), \mathrm{B}(\mathrm{x}))$, $\left.\max \left(\mathrm{A}(1), \mathrm{B}\left(\mathrm{y}^{-1}\right)\right)\right)=\mathrm{S}\left(\mathrm{B}(\mathrm{x}), \mathrm{B}\left(\mathrm{y}^{-1}\right)\right) \leq \mathrm{S}(\mathrm{B}(\mathrm{x}), \mathrm{B}(\mathrm{y}))$. Therefore, $B\left(x y^{-1}\right) \leq S(B(x), B(y))$, for all $x$ and $y \neq 0^{\prime}$ in $H$.

Hence B is an anti S-fuzzy subfield of H . Thus (ii) is proved. And (iii) is clear.
Theorem: Let A be a Fuzzy subset of a field ( $\mathrm{F},+,$. ) and V be the anti-strongest S -fuzzy relation of F . Then A is an anti S fuzzy subfield of F if and only if V is an anti S -fuzzy subfield of F×F.
Proof: Suppose that A is an anti S-fuzzy subfield of F. Then for any $x=\left(x_{1}, x_{2}\right)$ and $y=\left(y_{1}, y_{2}\right)$ are in $F \times F$. We have, $V(x-y)=V[$ $\left.\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)-\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right]=\mathrm{V}\left(\mathrm{x}_{1}-\mathrm{y}_{1}, \mathrm{x}_{2}-\mathrm{y}_{2}\right)=\max \left(\mathrm{A}\left(\mathrm{x}_{1}-\mathrm{y}_{1}\right), \mathrm{A}\left(\mathrm{x}_{2}-\right.\right.$ $\left.\left.y_{2}\right)\right) \leq \max \left(S\left(A\left(x_{1}\right), A\left(y_{1}\right)\right), S\left(A\left(x_{2}\right), A\left(y_{2}\right)\right)\right)=S\left(\max \left(A\left(x_{1}\right)\right.\right.$, $\left.\left.\mathrm{A}\left(\mathrm{x}_{2}\right)\right), \max \left(\mathrm{A}\left(\mathrm{y}_{1}\right), \mathrm{A}\left(\mathrm{y}_{2}\right)\right)\right)=\mathrm{S}\left(\mathrm{V}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), \mathrm{V}\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right)=\mathrm{S}(\mathrm{V}(\mathrm{x})$, $V(y))$. Therefore, $V(x-y) \leq S(V(x), V(y))$, for all $x$ and $y$ in $\mathrm{F} \times \mathrm{F}$. And $\mathrm{V}\left(\mathrm{xy}^{-1}\right)=\mathrm{V}\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)^{-1}\right]=\mathrm{V}\left(\mathrm{x}_{1} \mathrm{y}_{1}^{-1}, \mathrm{x}_{2} \mathrm{y}_{2}^{-1}\right)=$ $\max \left(\mathrm{A}\left(\mathrm{x}_{1} \mathrm{y}_{1}{ }^{-1}\right), \mathrm{A}\left(\mathrm{x}_{2} \mathrm{y}_{2}{ }^{-1}\right)\right) \leq \max \left(\mathrm{S}\left(\mathrm{A}\left(\mathrm{x}_{1}\right), \mathrm{A}\left(\mathrm{y}_{1}\right)\right), \mathrm{S}\left(\mathrm{A}\left(\mathrm{x}_{2}\right)\right.\right.$, $\left.\left.\mathrm{A}\left(\mathrm{y}_{2}\right)\right)\right)=\mathrm{S}\left(\max \left(\mathrm{A}\left(\mathrm{x}_{1}\right), \mathrm{A}\left(\mathrm{x}_{2}\right)\right), \max \left(\mathrm{A}\left(\mathrm{y}_{1}\right), \mathrm{A}\left(\mathrm{y}_{2}\right)\right)\right)=\mathrm{S}($ $\left.\mathrm{V}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), \mathrm{V}\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right)=\mathrm{S}(\mathrm{V}(\mathrm{x}), \mathrm{V}(\mathrm{y}))$. Therefore, $\mathrm{V}\left(\mathrm{xy}^{-1}\right) \leq \mathrm{S}($ $V(x), V(y))$, for all $x$ and $y \neq(0,0)$ in $F \times F$. This proves that $V$ is an anti S-fuzzy subfield of $\mathrm{F} \times \mathrm{F}$. Conversely, assume that V is an anti S-fuzzy subfield of $\mathrm{F} \times \mathrm{F}$, then for any $\mathrm{x}=\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)$ and $\mathrm{y}=$ $\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)$ are in $\mathrm{F} \times \mathrm{F}$, we have $\max \left\{\mathrm{A}\left(\mathrm{x}_{1}-\mathrm{y}_{1}\right), \mathrm{A}\left(\mathrm{x}_{2}-\mathrm{y}_{2}\right)\right\}=\mathrm{V}($ $\left.x_{1}-y_{1}, x_{2}-y_{2}\right)=V\left[\left(x_{1}, x_{2}\right)-\left(y_{1}, y_{2}\right)\right]=V(x-y) \leq S(V(x)$, $\mathrm{V}(\mathrm{y}))=\mathrm{S}\left(\mathrm{V}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), \mathrm{V}\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right)=\mathrm{S}\left(\max \left(\mathrm{A}\left(\mathrm{x}_{1}\right), \mathrm{A}\left(\mathrm{x}_{2}\right)\right), \max (\right.$ $\left.A\left(y_{1}\right), A\left(y_{2}\right)\right)$ ). If we put $x_{2}=y_{2}=0$, we get, $A\left(x_{1}-y_{1}\right) \leq S$ ( $\left.A\left(x_{1}\right), A\left(y_{1}\right)\right)$, for all $x_{1}$ and $y_{1}$ in $F$. And max $\left\{A\left(x_{1} y_{1}^{-1}\right), A\left(x_{2} y_{2}\right.\right.$ $\left.\left.{ }^{1}\right)\right\}=\mathrm{V}\left(\mathrm{x}_{1} \mathrm{y}_{1}{ }^{-1}, \mathrm{x}_{2} \mathrm{y}_{2}{ }^{-1}\right)=\mathrm{V}\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)^{-1}\right]=\mathrm{V}\left(\mathrm{xy}^{-1}\right) \leq \mathrm{S}(\mathrm{V}(\mathrm{x})$, $\mathrm{V}(\mathrm{y}))=\mathrm{S}\left(\mathrm{V}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), \mathrm{V}\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right)=\mathrm{S}\left(\max \left(\mathrm{A}\left(\mathrm{x}_{1}\right), \mathrm{A}\left(\mathrm{x}_{2}\right)\right)\right.$, max $($ $\left.A\left(y_{1}\right), A\left(y_{2}\right)\right)$ ). If we put $x_{2}=y_{2}=1$, We get, $A\left(x_{1} y_{1}{ }^{-1}\right) \leq S$ ( $\left.A\left(x_{1}\right), A\left(y_{1}\right)\right)$, for all $x_{1}$ and $y_{1} \neq 0$ in $F$. Hence $A$ is an anti Sfuzzy subfield of $F$.
Theorem: Let ( $\mathrm{F},+, \cdot$ ) and ( $\left.\mathrm{F}^{1},+, \cdot\right)$ be any two fields. The homomorphic image of an anti S-fuzzy subfield of $F$ is an anti S-fuzzy subfield of $\mathrm{F}^{\prime}$.
Proof: Let $(F,+, \cdot)$ and $\left(F^{\prime},+, \cdot\right)$ be any two fields and $f: F \rightarrow F^{\prime}$ be a homomorphism. That is $f(x+y)=f(x)+f(y)$, for all $x$ and $y$ in $F$ and $f(x y)=f(x) f(y)$, for all $x$ and $y$ in $F$. Let $V=f(A)$, where $A$ is an anti S-fuzzy subfield of $F$. We have to prove that $V$ is an anti S-fuzzy subfield of $F^{\prime}$. Now, for $f(x)$ and $f(y)$ in $F^{\prime}$, we have $\mathrm{V}(\mathrm{f}(\mathrm{x})-\mathrm{f}(\mathrm{y}))=\mathrm{V}(\mathrm{f}(\mathrm{x}-\mathrm{y})) \leq \mathrm{A}(\mathrm{x}-\mathrm{y}) \leq \mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))$, which implies that $V(f(x)-f(y)) \leq S(V(f(x)), V(f(y)))$, for all $f(x)$ and $f(y)$ in $F^{\prime}$. And $V\left(f(x)(f(y))^{-1}\right)=V\left(f\left(x y^{-1}\right)\right) \leq A\left(x y^{-1}\right) \leq$ $S(A(x), A(y))$, which implies that $V\left(f(x)(f(y))^{-1}\right) \leq S($ $V(f(x)), V(f(y)))$, for all $f(x)$ and $f(y) \neq 0^{\prime}$ in $F^{\prime}$. Hence $V$ is an anti $S$-fuzzy subfield of a field $F^{\prime}$.
Theorem: Let $(\mathrm{F},+, \cdot)$ and ( $\left.\mathrm{F}^{1},+, \cdot\right)$ be any two fields. The homomorphic pre-image of an anti S-fuzzy subfield of $F^{\prime}$ is an anti S-fuzzy subfield of $F$.
Proof: Let $(F,+, \cdot)$ and $\left(F^{\prime},+, \cdot\right)$ be any two fields and $f: F \rightarrow F^{\prime}$ be a homomorphism. That is $f(x+y)=f(x)+f(y)$, for all $x$ and $y$ in $F$ and $f(x y)=f(x) f(y)$, for all $x$ and $y$ in $F$. Let $V=f(A)$, where $V$ is an anti S-fuzzy subfield of $F^{1}$. We have to prove that $A$ is an anti S-fuzzy subfield of F. Let $x$ and $y$ in F. Then, $A(x-y)=V($ $\mathrm{f}(\mathrm{x}-\mathrm{y}))=\mathrm{V}(\mathrm{f}(\mathrm{x})-\mathrm{f}(\mathrm{y})) \leq \mathrm{S}(\mathrm{V}(\mathrm{f}(\mathrm{x})), \mathrm{V}(\mathrm{f}(\mathrm{y})))=\mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))$, which implies that $A(x-y) \leq S(A(x), A(y))$, for all $x$ and $y$ in F. And, $A\left(x y^{-1}\right)=V\left(f\left(x y^{-1}\right)\right)=V\left(f(x) f\left(y^{-1}\right)\right)=V\left(f(x)(f(y))^{-1}\right)$ $\leq \mathrm{S}(\mathrm{V}(\mathrm{f}(\mathrm{x})), \mathrm{V}(\mathrm{f}(\mathrm{y})))=\mathrm{S}(\mathrm{A}(\mathrm{x}), \mathrm{A}(\mathrm{y}))$, which implies that $A\left(x y^{-1}\right) \leq S(A(x), A(y))$, for all $x$ and $y \neq 0$ in F. Hence $A$ is an anti $S$-fuzzy subfield of a field $F$.
In the following Theorem $\circ$ is the composition operation of functions:
Theorem: Let A be an anti S-fuzzy subfield of a field H and f is an isomorphism from a field F onto H . Then $\mathrm{A} \circ \mathrm{f}$ is an anti S fuzzy subfield of $F$.

Proof: Let $x$ and $y$ in F and A be an anti S-fuzzy subfield of a field $H$. Then we have, $(A \circ f)(x-y)=A(f(x-y))=A(f(x)+$ $f(-y))=A(f(x)-f(y)) \leq S(A(f(x)), A(f(y))) \leq S((A \circ f)(x)$, $(A \circ f)(y))$, which implies that $(A \circ f)(x-y) \leq S((A \circ f)(x)$, $(A \circ f$ $)(y)$ ), for all $x$ and $y$ in $F$. And, $(A \circ f)\left(x y^{-1}\right)=A\left(f\left(x y^{-1}\right)\right)=A($ $\left.\mathrm{f}(\mathrm{x}) \mathrm{f}\left(\mathrm{y}^{-1}\right)\right)=\mathrm{A}\left(\mathrm{f}(\mathrm{x})(\mathrm{f}(\mathrm{y}))^{-1}\right) \leq \mathrm{S}(\mathrm{A}(\mathrm{f}(\mathrm{x})), \mathrm{A}(\mathrm{f}(\mathrm{y}))) \leq \mathrm{S}((\mathrm{A} \circ \mathrm{f})(\mathrm{x})$, $(A \circ f)(y))$, which implies that $(A \circ f)\left(x y^{-1}\right) \leq S((A \circ f)(x),(A \circ f$ $)(y)$ ), for all $x$ and $y \neq 0$ in F. Therefore ( $A \circ f$ ) is an anti $S$ fuzzy subfield of a field $F$.
Theorem: If A is an anti S-fuzzy subfield of a field ( $\mathrm{F},+$, . ), then the pseudo anti $S$-fuzzy coset $(a A)^{p}$ is an anti $S$-fuzzy subfield of a field $F$, for every $a \in F$.
Proof: Let A be an anti S-fuzzy subfield of a field ( F, +, . ). For every $x$ and $y$ in $F$, we have, $\left((a A)^{p}\right)(x-y)=p(a) A(x-y) \leq$ $p(a) S(A(x), A(y))=S(p(a) A(x), p(a) A(y))=S\left(\left((a A)^{p}\right)(x)\right.$, ( $\left.\left.(a A)^{p}\right)(y)\right)$. Therefore, $\left((a A)^{p}\right)(x-y) \leq S\left(\left((a A)^{p}\right)(x),\left((a A)^{p}\right.\right.$ $)(y)$ ), for all $x$ and $y$ in $F$. And for every $x$ and $y \neq 0$ in $F,\left((a A)^{p}\right.$ ) $\left(x y^{-1}\right)=p(a) A\left(x y^{-1}\right) \leq p(a) S(A(x), A(y))=S(p(a) A(x)$, $p(a) A(y))=S\left(\left((a A)^{p}\right)(x),\left((a A)^{p}\right)(y)\right)$. Therefore, $\left((a A)^{p}\right)\left(x y^{-1}\right) \leq$ $S\left(\left((a A)^{p}\right)(x),\left((a A)^{p}\right)(y)\right)$, for all $x$ and $y \neq 0$ in $F$. Hence $(a A)^{p}$ is an anti S-fuzzy subfield of a field F.
