Intuitionistic fuzzy subsemiring.

## Introduction

There are many concepts of universal algebras generalizing an associative ring ( $R ;+;$.). Some of them in particular, nearrings and several kinds of semirings have been proven very useful. An algebra ( $\mathrm{R} ;+$, .) is said to be a semiring if $(\mathrm{R} ;+$ ) and $(R ;$.) are semigroups satisfying $a .(b+c)=a . b+a$. $c$ and $(b+c) . a=b$. $a+c$. $a$ for all $a, b$ and $c$ in $R$. A semiring $R$ is said to be additively commutative if $a+b=b+a$ for all $a, b$ in $R$. A semiring R may have an identity 1 , defined by $1 . \mathrm{a}=\mathrm{a}=\mathrm{a} .1$ and a zero 0 , defined by $0+\mathrm{a}=\mathrm{a}=\mathrm{a}+0$ and $\mathrm{a} .0=0=0 . \mathrm{a}$ for all a in R. After the introduction of fuzzy sets by L.A.Zadeh[22], several researchers explored on the generalization of the concept of fuzzy sets. The concept of intuitionistic fuzzy subset was introduced by K.T.Atanassov[1,2], as a generalization of the notion of fuzzy set. The notion of fuzzy subnearrings and ideals was introduced by S.Abou Zaid[18]. In this paper, we introduce the some theorems in intuitionistic fuzzy subsemiring of a semiring.

## 1. Preliminaries:

1.1 Definition: Let $X$ be a non-empty set. A fuzzy subset A of X is a function $\mathrm{A}: \mathrm{X} \rightarrow[0,1]$.
1.2 Definition: Let $R$ be a semiring. A fuzzy subset $A$ of $R$ is said to be a fuzzy subsemiring (FSSR) of R if it satisfies the following conditions:
(ii) $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$,
(i) $\mu_{\mathrm{A}}(\mathrm{xy}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$, for all x and y in $R$.
1.3 Definition: Let $R$ be a semiring. A fuzzy subset A of $R$ is said to be an anti-fuzzy subsemiring (AFSSR) of R if it satisfies the following conditions:
(i) $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \leq \max \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$,
(ii) $\mu_{\mathrm{A}}(\mathrm{xy}) \leq \max \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$, for all x and y in R.
1.4 Definition [5]: An intuitionistic fuzzy subset (IFS) A in X is defined as an object of the form $\mathrm{A}=\left\{\left\langle\mathrm{x}, \mu_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{A}}(\mathrm{x})\right\rangle / \mathrm{x} \in \mathrm{X}\right\}$, where $\mu_{\mathrm{A}}: \mathrm{X} \rightarrow[0,1]$ and $v_{\mathrm{A}}: \mathrm{X} \rightarrow[0,1]$ define the degree of membership and the degree of non-membership of the element

#### Abstract

In this paper, we made an attempt to study the algebraic nature of intuitionistic fuzzy subsemiring of a semiring.

$\mathrm{x} \in \mathrm{X}$ respectively and for every $\mathrm{x} \in \mathrm{X}$ satisfying $0 \leq \mu_{\mathrm{A}}(\mathrm{x})+$ $v_{\mathrm{A}}(\mathrm{x}) \leq 1$.
1.1 Example: Let $X=\{a, b, c\}$ be a set. Then $A=\{\langle a, 0.52$, $0.34\rangle,\langle\mathrm{b}, 0.14,0.71\rangle,\langle\mathrm{c}, 0.25,0.34\rangle\}$ is an intuitionistic fuzzy subset of X.
1.5 Definition: If A is a intuitionistic fuzzy subset of $X$, then the complement of $A$, denoted $A^{c}$ is the intuitionistic fuzzy set of $X$, given by $A^{c}(x)=\left\{\left\langle x, v_{A}(x), \mu_{A}(x)\right\rangle / x \in X \quad\right\}$, for all $x$ $\in \mathrm{X}$.
1.2 Example: Let $\mathrm{A}=\{\langle\mathrm{a}, 0.7,0.1\rangle,\langle\mathrm{b}, 0.6,0.2\rangle,\langle\mathrm{c}, 0.2$, $0.3\rangle\}$ is a fuzzy subset of $X=\{a, b, c\}$. The complement of $A$ is $\mathrm{A}^{\mathrm{c}}=\{\langle\mathrm{a}, 0.1,0.7\rangle,\langle\mathrm{b}, 0.2,0.6\rangle,\langle\mathrm{c}, 0.3,0.2\rangle\}$.
1.6 Definition: Let A and B be any two intuitionistic fuzzy subsets of a set X . We define the following operations:
(i) $\mathrm{A} \cap \mathrm{B}=\left\{\left\langle\mathrm{x}, \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{B}}(\mathrm{x})\right\}, \max \left\{\mathrm{v}_{\mathrm{A}}(\mathrm{x}), \nu_{\mathrm{B}}(\mathrm{x})\right\}\right\rangle\right\}$, for all $x \in X$.
(ii) $\mathrm{A} \cup \mathrm{B}=\left\{\left\langle\mathrm{x}, \max \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{B}}(\mathrm{x})\right\}, \min \left\{\nu_{\mathrm{A}}(\mathrm{x}), \nu_{\mathrm{B}}(\mathrm{x})\right\}\right\rangle\right.$ $\}$, for all $x \in X$.
(iii) $\square \mathrm{A}=\left\{\left\langle\mathrm{x}, \mu_{\mathrm{A}}(\mathrm{x}), 1-\mu_{\mathrm{A}}(\mathrm{x})\right\rangle / \mathrm{x} \in \mathrm{X}\right\}$, for all x in X .
(iv) $\nabla \mathrm{A}=\left\{\left\langle\mathrm{x}, 1-v_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{A}}(\mathrm{x})\right\rangle / \mathrm{x} \in \mathrm{X}\right\}$, for all x in X .
1.7 Definition: Let $R$ be a semiring. An intuitionistic fuzzy subset $A$ of $R$ is said to be an intuitionistic fuzzy subsemiring (IFSSR) of R if it satisfies the following conditions:
(i) $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$,
(ii) $\mu_{\mathrm{A}}(\mathrm{xy}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$,
(iii) $v_{A}(x+y) \leq \max \left\{v_{A}(x), v_{A}(y)\right\}$,
(iv) $v_{A}(x y) \leq \max \left\{v_{A}(x), v_{A}(y)\right\}$, for all $x$ and $y$ in R.
1.8 Definition: Let A and B be intuitionistic fuzzy subsets of sets G and H , respectively. The product of A and B , denoted by $A x B$, is defined as $A x B=\left\{\left\langle(x, y), \mu_{A x B}(x, y), v_{A x B}(x, y)\right\rangle /\right.$ for all x in G and y in H$\}$, where $\mu_{\mathrm{AxB}}(\mathrm{x}, \mathrm{y})=\min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{B}}(\mathrm{y})\right\}$ and $v_{\mathrm{AxB}}(\mathrm{x}, \mathrm{y})=\max \left\{v_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{B}}(\mathrm{y})\right\}$.
1.9 Definition: Let A be an intuitionistic fuzzy subset in a set $S$, the strongest intuitionistic fuzzy relation on $S$, that is a
intuitionistic fuzzy relation on A is V given by $\mu_{\mathrm{V}}(\mathrm{x}, \mathrm{y})=\min \{$ $\left.\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$ and $\nu_{\mathrm{V}}(\mathrm{x}, \mathrm{y})=\max \left\{\nu_{\mathrm{A}}(\mathrm{x}), \nu_{\mathrm{A}}(\mathrm{y})\right\}$, for all x and y in $S$.
1.10 Definition: Let ( $\mathrm{R},+\cdot \cdot$ ) and ( $\left.\mathrm{R}^{\prime},+, \cdot\right)$ be any two semirings. Let $f: R \rightarrow R^{\prime}$ be any function and $A$ be an intuitionistic fuzzy subsemiring in $\mathrm{R}, \mathrm{V}$ be an intuitionistic fuzzy subsemiring in $f(R)=R^{\prime}$, defined by $\mu_{\mathrm{V}}(\mathrm{y})=$
$\mu_{\mathrm{A}}(\mathrm{x})$ and $\operatorname{Sup}_{x \in f^{-1}(y)}$
$v_{V}(y)=\inf _{x \in f^{-1}} v_{A}(x)$, for all $x$ in $R$ and $y$ in $R^{\prime}$. Then $A$ is called a preimage of $V$ under $f$ and is denoted by $f^{-1}(\mathrm{~V})$.
1.11 Definition: Let A be an intuitionistic fuzzy subsemiring of a semiring $(\mathrm{R},+, \cdot)$ and a in R . Then the pseudo intuitionistic fuzzy coset $(a A)^{p}$ is defined by $\left(\left(a \mu_{A}\right)^{p}\right)(x)=p(a) \mu_{A}(x)$ and $($ $\left.\left(a v_{A}\right)^{p}\right)(x)=p(a) v_{A}(x)$, for every $x$ in $R$ and for some $p$ in $P$.

## 2. Properties of intuitionistic fuzzy subsemiring of a semiring

 r2.1 Theorem: Intersection of any two intuitionistic fuzzy subsemiring of a semiring R is a intuitionistic fuzzy subsemiring of R.
Proof: Let A and B be any two intuitionistic fuzzy subsemirings of a semiring $R$ and $x$ and $y$ in $R$. Let $\left.A=\left(x, \mu_{A}(x), v_{A}(x)\right) / x \in R\right\}$ and $B=\left\{\left(x, \mu_{B}(x), v_{B}(x)\right) / x \in R\right\}$ and also le $C=A \cap B=\{(x$, $\left.\left.\mu_{C}(x) \quad, v_{C}(x \quad)\right) \quad / \quad x \in R\right\}$, where $\quad \min \left\{\mu_{A}(x), \mu_{B}(x)\right\}=\mu_{C}(x)$ and $\max \left\{v_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{B}}(\mathrm{x})\right\}=v_{\mathrm{C}}(\mathrm{x}) . \operatorname{Now}, \mu_{\mathrm{C}}(\mathrm{x}+\mathrm{y})=\min \{$ $\left.\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}), \mu_{\mathrm{B}}(\mathrm{x}+\mathrm{y})\right\} \geq \min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}, \mu_{\mathrm{A}}(\mathrm{y})\right\}, \min \left\{\mu_{\mathrm{B}}(\mathrm{x})\right.\right.\right.$, $\left.\left.\mu_{\mathrm{B}}(\mathrm{y})\right\}\right\}=\min \left\{\min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{B}}(\mathrm{x})\right\}, \min \left\{\mu_{\mathrm{A}}(\mathrm{y}), \mu_{\mathrm{B}}(\mathrm{y})\right\}\right\}=$ $\min \left\{\mu_{C}(x), \mu_{C}(y)\right\}$. Therefore, $\mu_{C}(x+y) \geq \min \left\{\mu_{C}(x), \mu_{C}(y)\right\}$, for all x and y in R. And, $\mu_{\mathrm{C}}(\mathrm{xy})=\min \left\{\mu_{\mathrm{A}}(\mathrm{xy}), \mu_{\mathrm{B}}(\mathrm{xy})\right\} \geq \min \{$ $\min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}, \min \left\{\mu_{\mathrm{B}}(\mathrm{x}), \mu_{\mathrm{B}}(\mathrm{y})\right\}=\min \left\{\min \left\{\mu_{\mathrm{A}}(\mathrm{x})\right.\right.$, $\left.\left.\mu_{\mathrm{B}}(\mathrm{x})\right\}, \min \left\{\mu_{\mathrm{A}}(\mathrm{y}), \mu_{\mathrm{B}}(\mathrm{y})\right\}\right\}=\min \left\{\mu_{\mathrm{C}}(\mathrm{x}), \mu_{\mathrm{C}}(\mathrm{y})\right\}$. Therefore, $\mu_{C}(x y) \geq \min \left\{\mu_{C}(x), \mu_{C}(y)\right\}$, for all $x$ and $y$ in R. Now, $v_{C}(x+y$ $)=\max \left\{v_{A}(x+y), v_{B}(x+y)\right\} \leq \max \left\{\max \left\{v_{A}(x), v_{A}(y)\right\}\right.$, $\left.\max \left\{v_{B}(x), v_{B}(y)\right\}\right\}=\max \left\{\max \left\{v_{A}(x), v_{B}(x)\right\}, \max \left\{v_{A}(y)\right.\right.$, $\left.\left.v_{B}(y)\right\}\right\}=\max \left\{v_{C}(x), v_{C}(y)\right\}$. Therefore, $v_{C}(x+y) \leq$ $\max \left\{v_{\mathrm{C}}(\mathrm{x}), v_{\mathrm{C}}(\mathrm{y})\right\}$, for all x and y in R. And, $v_{\mathrm{C}}(\mathrm{xy})=\max \{$ $\left.v_{A}(x y), v_{B}(x y)\right\} \leq \max \left\{\max \left\{v_{A}(x), v_{A}(y)\right\}, \max \left\{v_{B}(x)\right.\right.$, $\left.\left.\nu_{B}(\mathrm{y})\right\}\right\}=\max \left\{\max \left\{v_{\mathrm{A}}(\mathrm{x}), \nu_{\mathrm{B}}(\mathrm{x})\right\}, \max \left\{\mathrm{v}_{\mathrm{A}}(\mathrm{y}), \mathrm{v}_{\mathrm{B}}(\mathrm{y})\right\}\right\}=$ $\max \left\{v_{\mathrm{C}}(\mathrm{x}), v_{\mathrm{C}}(\mathrm{y})\right\}$.Therefore, $v_{\mathrm{C}}(\mathrm{xy}) \leq \max \left\{v_{\mathrm{C}}(\mathrm{x}), v_{\mathrm{C}}(\mathrm{y})\right\}$, for all x and y in R. Therefore C is an intuitionistic fuzzy subsemiring of $R$. Hence the intersection of any two intuitionistic fuzzy subsemirings of a semiring $R$ is an intuitionistic fuzzy subsemiring of R.
2.2 Theorem: The intersection of a family of intuitionistic fuzzy subsemirings of semiring $R$ is an intuitionistic fuzzy subsemiring of $R$.
Proof: Let $\left\{\mathrm{V}_{\mathrm{i}}: \mathrm{i} \in \mathrm{I}\right\}$ be a family of intuitionistic fuzzy subsemirings of a semiring R and let $\mathrm{A}=\overparen{i \in I}, V_{i}$. Let x and y in R. Then, $\mu(\mathrm{x}+\mathrm{y})=\inf _{i \in I} \mu_{\mathrm{vi}}(\mathrm{x}+\mathrm{y}) \geq \inf _{i \in I} \min \left\{\mu_{\mathrm{vi}}(\mathrm{x}), \mu_{\mathrm{vi}}(\mathrm{y})\right.$ $\}=\min \left\{\inf _{i \in I} \mu_{\mathrm{vi}}(\mathrm{x}), \inf _{i \in I} \mu_{\mathrm{vi}}(\mathrm{y})\right\}=\min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$. Therefore, $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$, for all x and y in R . And, $\mu_{\mathrm{A}}(\mathrm{xy})=\inf _{i \in I} \mu_{\mathrm{vi}}(\mathrm{xy}) \geq \inf _{i \in I} \min \left\{\mu_{\mathrm{vi}}(\mathrm{x}), \mu_{\mathrm{Vi}}(\mathrm{y})\right\}=\min \{$ $\left.\inf _{i \in I} \mu_{\mathrm{Vi}^{2}}(\mathrm{x}), \inf _{i \in I} \mu_{\mathrm{Vi}}(\mathrm{y})\right\}=\min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$. Therefore, $\mu_{\mathrm{A}}(\mathrm{xy})$ $\geq \min \left\{\mu_{A}(x), \mu_{A}(y)\right\}$, for all $x$ and $y$ in R. Now, $v_{A}(x+y)=$
$\sup v_{\mathrm{Vi}}(\mathrm{x}+\mathrm{y}) \leq \sup \max \left\{v_{\mathrm{vi}}(\mathrm{x}), v_{\mathrm{vi}}(\mathrm{y})\right\}=\max \left\{\sup v_{\mathrm{vi}}(\mathrm{x})\right.$, $\left.\sup v_{\mathrm{v}_{\mathrm{i}}}(\mathrm{y})\right\}=\max \left\{v_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{A}}(\mathrm{y})\right\}$. Therefore,,$v_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \leq$ i $\in I$
$\max \left\{v_{A}(x), v_{A}(y)\right\}$, for all $x$ and $y$ in $R$. And, $v_{A}(x y)=$ $\sup v_{\mathrm{vi}}(\mathrm{xy}) \leq \sup \max \left\{v_{\mathrm{vi}}(\mathrm{x}), v_{\mathrm{Vi}}(\mathrm{y})\right\}=\max \left\{\sup v_{\mathrm{Vi}}(\mathrm{x})\right.$, $\left.\sup v_{\mathrm{Vi}}(\mathrm{y})\right\}=\max \left\{v_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{A}}(\mathrm{y})\right\}$. Therefore, $v_{\mathrm{A}}(\mathrm{xy}) \leq \max \{$ $i \in I$
$v_{A}(\mathrm{x}), v_{\mathrm{A}}(\mathrm{y})$ \}, for all x and y in R . That is, A is an intuitionistic fuzzy subsemiring of a semiring R. Hence, the intersection of a family of intuitionistic fuzzy subsemirings of $R$ is an intuitionistic fuzzy subsemiring of R.
2.3 Theorem: If $A$ and $B$ are any two intuitionistic fuzzy subsemirings of the semirings $R_{1}$ and $R_{2}$ respectively, then $A x B$ is an intuitionistic fuzzy subsemiring of $R_{1} \times R_{2}$.
Proof: Let A and B be two intuitionistic fuzzy subsemirings of the semirings $R_{1}$ and $R_{2}$ respectively. Let $x_{1}$ and $x_{2}$ be in $R_{1}, y_{1}$ and $y_{2}$ be in $R_{2}$. Then ( $x_{1}, y_{1}$ ) and ( $x_{2}, y_{2}$ ) are in $R_{1} x R_{2}$. Now, $\mu_{\mathrm{AxB}}\left[\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right)+\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right]=\mu_{\mathrm{AxB}}\left(\mathrm{x}_{1}+\mathrm{x}_{2}, \mathrm{y}_{1}+\mathrm{y}_{2}\right)=\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}+\mathrm{x}_{2}\right.\right.$ ), $\left.\mu_{\mathrm{B}}\left(\mathrm{y}_{1}+\mathrm{y}_{2}\right)\right\} \geq \min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right)\right\}, \min \left\{\mu_{\mathrm{B}}\left(\mathrm{y}_{1}\right)\right.\right.$, $\left.\left.\mu_{\mathrm{B}}\left(\mathrm{y}_{2}\right)\right\}\right\}=\min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{B}}\left(\mathrm{y}_{1}\right)\right\}, \min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right), \mu_{\mathrm{B}}\left(\mathrm{y}_{2}\right)\right\}\right\}=$ $\min \left\{\mu_{\mathrm{AxB}}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), \mu_{\mathrm{AxB}}\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right\}$. Therefore, $\mu_{\mathrm{AxB}}\left[\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right)+\right.$ $\left.\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right] \geq \min \left\{\mu_{\mathrm{AxB}}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), \mu_{\mathrm{AxB}}\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right\}$.Also, $\quad \mu_{\mathrm{AxB}}\left[\left(\mathrm{x}_{1}\right.\right.$, $\left.\left.y_{1}\right)\left(x_{2}, y_{2}\right)\right]=\mu_{\text {AxB }}\left(x_{1} x_{2}, y_{1} y_{2}\right)=\min \left\{\mu_{A}\left(x_{1} x_{2}\right), \mu_{B}\left(y_{1} y_{2}\right)\right\} \geq$ $\min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right)\right\}, \min \left\{\mu_{\mathrm{B}}\left(\mathrm{y}_{1}\right), \mu_{\mathrm{B}}\left(\mathrm{y}_{2}\right)\right\}\right\}=\min \{\min$ $\left.\left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{B}}\left(\mathrm{y}_{1}\right)\right\}, \min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right), \mu_{\mathrm{B}}\left(\mathrm{y}_{2}\right)\right\}\right\}=\min \left\{\mu_{\mathrm{AxB}}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right)\right.$, $\left.\mu_{\mathrm{AxB}}\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right\}$.Therefore, $\mu_{\mathrm{AxB}}\left[\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right)\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right] \geq \min \left\{\mu_{\mathrm{AxB}}\left(\mathrm{x}_{1}\right.\right.$, $\left.\left.\mathrm{y}_{1}\right), \mu_{\mathrm{AxB}}\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right\}$. Now, $\mathrm{v}_{\mathrm{AxB}}\left[\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right)+\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right]=v_{\mathrm{AxB}}\left(\mathrm{x}_{1}+\mathrm{x}_{2}\right.$, $\left.\mathrm{y}_{1}+\mathrm{y}_{2}\right)=\max \left\{\mathrm{v}_{\mathrm{A}}\left(\mathrm{x}_{1}+\mathrm{x}_{2}\right), \mathrm{v}_{\mathrm{B}}\left(\mathrm{y}_{1}+\mathrm{y}_{2}\right)\right\} \leq \max \left\{\max \left\{\mathrm{v}_{\mathrm{A}}\left(\mathrm{x}_{1}\right)\right.\right.$, $\left.\left.v_{A}\left(x_{2}\right)\right\}, \max \left\{v_{B}\left(y_{1}\right), v_{B}\left(y_{2}\right)\right\}\right\}=\max \left\{\max \left\{v_{A}\left(x_{1}\right), v_{B}\left(y_{1}\right)\right\}\right.$, $\left.\max \left\{v_{\mathrm{A}}\left(\mathrm{x}_{2}\right), v_{\mathrm{B}}\left(\mathrm{y}_{2}\right)\right\}\right\}=\max \left\{v_{\mathrm{AxB}}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), v_{\mathrm{AxB}}\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right\}$. Therefore, $v_{\mathrm{AxB}}\left[\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right)+\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right] \leq \max \left\{v_{\mathrm{AxB}}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), v_{\mathrm{AxB}}\right.$ $\left.\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right\}$. Also, $\quad v_{\text {AxB }}\left[\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right)\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right]=v_{\text {AxB }}\left(\mathrm{x}_{1} \mathrm{x}_{2}, \mathrm{y}_{1} \mathrm{y}_{2}\right)=$ $\max \left\{\quad v_{A}\left(x_{1} x_{2}\right), \quad v_{B}\left(y_{1} y_{2}\right)\right\} \leq \max \quad\{\max$ $\left.\left\{v_{A}\left(x_{1}\right), v_{A}\left(x_{2}\right)\right\}, \max \left\{v_{B}\left(y_{1}\right), v_{B}\left(y_{2}\right)\right\}\right\}=\max \left\{\max \left\{v_{A}\left(x_{1}\right), v_{B}\left(y_{1}\right)\right\}\right.$, $\max \left\{v_{\mathrm{A}}\left(\mathrm{x}_{2}\right), v_{\mathrm{B}}\left(\mathrm{y}_{2}\right)\right\}=\max \left\{v_{\mathrm{AxB}}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), v_{\mathrm{AxB}}\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right\}$. Therefore, $v_{\text {AxB }}\left[\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right)\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right] \leq \max \left\{\mathrm{v}_{\mathrm{AxB}}\left(\mathrm{x}_{1}, \mathrm{y}_{1}\right), v_{\text {AxB }}\left(\mathrm{x}_{2}, \mathrm{y}_{2}\right)\right\}$. Hence AxB is an intuitionistic fuzzy subsemiring of semiring of $R_{1} \times R_{2}$.
2.4 Theorem: Let A be an intuitionistic fuzzy subset of a semiring R and V be the strongest intuitionistic fuzzy relation of $R$. Then $A$ is an intuitionistic fuzzy subsemiring of $R$ if and only if $V$ is an intuitionistic fuzzy subsemiring of RxR.
Proof: Suppose that A is an intuitionistic fuzzy subsemiring of a semiring R. Then for any $x=\left(x_{1}, x_{2}\right)$ and $y=\left(y_{1}, y_{2}\right)$ are in RxR. We have, $\mu_{\mathrm{V}}(\mathrm{x}+\mathrm{y})=\mu_{\mathrm{V}}\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)+\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right]=\mu_{\mathrm{V}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}, \mathrm{x}_{2}+\mathrm{y}_{2}\right.$ $)=\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2}+\mathrm{y}_{2}\right)\right\} \geq \min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{y}_{1}\right)\right.\right.$ $\left.\}, \min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right), \mu_{\mathrm{A}}\left(\mathrm{y}_{2}\right)\right\}\right\}=\min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right)\right\}, \min \right.$ $\left.\left\{\mu_{\mathrm{A}}\left(\mathrm{y}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{y}_{2}\right)\right\}\right\}=\min \left\{\mu_{\mathrm{V}}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), \mu_{\mathrm{V}}\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right\}=\min \left\{\mu_{\mathrm{V}}\right.$ (x), $\left.\mu_{\mathrm{V}}(\mathrm{y})\right\}$. Therefore, $\mu_{\mathrm{V}}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\mu_{\mathrm{V}}(\mathrm{x}), \mu_{\mathrm{V}}(\mathrm{y})\right\}$, for all $x$ and $y$ in RxR. And, $\mu_{\mathrm{V}}(\mathrm{xy})=\mu_{\mathrm{V}}\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right]=\mu_{\mathrm{V}}($ $\left.\mathrm{x}_{1} \mathrm{y}_{1}, \mathrm{x}_{2} \mathrm{y}_{2}\right)=\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right)\right\} \geq \min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right)\right.\right.$, $\left.\left.\mu_{\mathrm{A}}\left(\mathrm{y}_{1}\right)\right\}, \min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right), \mu_{\mathrm{A}}\left(\mathrm{y}_{2}\right)\right\}\right\}=\min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right)\right\}\right.$, $\left.\min \left\{\mu_{\mathrm{A}}\left(\mathrm{y}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{y}_{2}\right)\right\}\right\}=\min \left\{\mu_{\mathrm{V}}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), \mu_{\mathrm{V}}\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right\}=\min \left\{\mu_{\mathrm{V}}\right.$ (x), $\left.\mu_{\mathrm{V}}(\mathrm{y})\right\}$.Therefore, $\mu_{\mathrm{V}}(\mathrm{xy}) \geq \min \left\{\mu_{\mathrm{V}}(\mathrm{x}), \mu_{\mathrm{V}}(\mathrm{y})\right\}$, for all x and y in RxR.We have, $v_{v}(\mathrm{x}+\mathrm{y})=v_{\mathrm{v}}\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)+\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right]=v_{\mathrm{v}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}\right.$ , $\left.\mathrm{x}_{2}+\mathrm{y}_{2}\right)=\max \left\{\mathrm{v}_{\mathrm{A}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}\right), v_{\mathrm{A}}\left(\mathrm{x}_{2}+\mathrm{y}_{2}\right)\right\} \leq \max \left\{\max \left\{\mathrm{v}_{\mathrm{A}}\left(\mathrm{x}_{1}\right)\right.\right.$, $\left.\left.v_{A}\left(y_{1}\right)\right\}, \max \left\{v_{A}\left(x_{2}\right), v_{A}\left(y_{2}\right)\right\}\right\}=\max \left\{\max \left\{v_{A}\left(x_{1}\right), v_{A}\left(x_{2}\right)\right\}\right.$, $\left.\max \left\{v_{\mathrm{A}}\left(\mathrm{y}_{1}\right), v_{\mathrm{A}}\left(\mathrm{y}_{2}\right)\right\}\right\}=\max \left\{v_{\mathrm{V}}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), v_{\mathrm{V}}\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right\}=\max \{$ $\left.v_{\mathrm{V}}(\mathrm{x}), v_{\mathrm{V}}(\mathrm{y})\right\}$. Therefore, $v_{\mathrm{V}}(\mathrm{x}+\mathrm{y}) \leq \max \left\{v_{\mathrm{V}}(\mathrm{x}), \mathrm{v}_{\mathrm{V}}(\mathrm{y})\right\}$, for
all $x$ and $y$ in RxR.And, $v_{V}(x y)=v_{V}\left[\left(x_{1}, x_{2}\right)\left(y_{1}, y_{2}\right)\right]=v_{V}\left(x_{1} y_{1}\right.$ , $\left.\mathrm{x}_{2} \mathrm{y}_{2}\right)=\max \left\{\mathrm{v}_{\mathrm{A}}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right), \mathrm{v}_{\mathrm{A}}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right)\right\} \leq \max \left\{\max \left\{\mathrm{v}_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mathrm{v}_{\mathrm{A}}\left(\mathrm{y}_{1}\right)\right.\right.$ $\left.\}, \max \left\{v_{A}\left(x_{2}\right), v_{A}\left(y_{2}\right)\right\}\right\}=\max \left\{\max \left\{v_{\mathrm{A}}\left(\mathrm{x}_{1}\right), v_{\mathrm{A}}\left(\mathrm{x}_{2}\right)\right\}, \max \{\right.$ $\left.\left.v_{A}\left(y_{1}\right), v_{A}\left(\mathrm{y}_{2}\right)\right\}\right\}=\max \left\{v_{\mathrm{V}}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), v_{\mathrm{V}}\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right\}=\max \left\{v_{\mathrm{V}}(\mathrm{x})\right.$, $\left.v_{\mathrm{V}}(\mathrm{y})\right\}$. Therefore, $v_{\mathrm{V}}(\mathrm{xy}) \leq \max \left\{v_{\mathrm{V}}(\mathrm{x}), v_{\mathrm{V}}(\mathrm{y})\right\}$, for all x and $y$ in RxR. This proves that V is an intuitionistic fuzzy subsemiring of RxR.

Conversely assume that V is an intuitionistic fuzzy subsemiring of RxR, then for any $x=\left(x_{1}, x_{2}\right)$ and $y=\left(y_{1}, y_{2}\right)$ are in $\operatorname{RxR}$, we have $\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2}+\mathrm{y}_{2}\right)\right\}=\mu_{\mathrm{V}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}\right.$, $\left.\mathrm{x}_{2}+\mathrm{y}_{2}\right)=\mu_{\mathrm{V}}\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)+\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right]=\mu_{\mathrm{V}}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\mu_{\mathrm{V}}(\mathrm{x}), \mu_{\mathrm{V}}\right.$ $(\mathrm{y})\}=\min \left\{\mu_{\mathrm{V}}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), \mu_{\mathrm{V}}\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right\}=\min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right)\right.\right.$ $\left.\}, \min \left\{\mu_{\mathrm{A}}\left(\mathrm{y}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{y}_{2}\right)\right\}\right\}$. If $\mu_{\mathrm{A}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}\right) \leq \mu_{\mathrm{A}}\left(\mathrm{x}_{2}+\mathrm{y}_{2}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right) \leq$ $\mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right), \quad \mu_{\mathrm{A}}\left(\mathrm{y}_{1}\right) \leq \mu_{\mathrm{A}}\left(\mathrm{y}_{2}\right)$, we get, $\mu_{\mathrm{A}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}\right) \geq$ $\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{y}_{1}\right)\right\}$, for all $\mathrm{x}_{1}$ and $\mathrm{y}_{1}$ in R. And, $\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right)\right\}=\mu_{\mathrm{V}}\left(\mathrm{x}_{1} \mathrm{y}_{1}, \mathrm{x}_{2} \mathrm{y}_{2}\right)=\mu_{\mathrm{V}}\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right]=$ $\mu_{\mathrm{V}}(\mathrm{x} y) \geq \min \left\{\mu_{\mathrm{V}}(\mathrm{x}), \mu_{\mathrm{V}}(\mathrm{y})\right\}=\min \left\{\mu_{\mathrm{V}}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), \quad \mu_{\mathrm{V}}\left(\mathrm{y}_{1}\right.\right.$, $\left.\left.y_{2}\right)\right\}=\min \left\{\min \left\{\mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right)\right\}, \min \left\{\mu_{\mathrm{A}}\left(\mathrm{y}_{1}\right), \mu_{\mathrm{A}}\left(\mathrm{y}_{2}\right)\right\}\right\}$. If $\mu_{\mathrm{A}}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right) \leq \mu_{\mathrm{A}}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right), \mu_{\mathrm{A}}\left(\mathrm{x}_{1}\right) \leq \mu_{\mathrm{A}}\left(\mathrm{x}_{2}\right), \mu_{\mathrm{A}}\left(\mathrm{y}_{1}\right) \leq \mu_{\mathrm{A}}\left(\mathrm{y}_{2}\right)$, we get $\mu_{A}\left(x_{1} y_{1}\right) \geq \min \left\{\mu_{A}\left(x_{1}\right), \mu_{A}\left(y_{1}\right)\right\}$, for all $x_{1}$ and $y_{1}$ in R. We have $\max \left\{v_{\mathrm{A}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}\right), v_{\mathrm{A}}\left(\mathrm{x}_{2}+\mathrm{y}_{2}\right)\right\}=v_{\mathrm{V}}\left(\mathrm{x}_{1}+\mathrm{y}_{1}, \mathrm{x}_{2}+\mathrm{y}_{2}\right)=v_{\mathrm{V}}\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)\right.$ $\left.+\left(\mathrm{y}_{1}, \mathrm{y}_{2}\right)\right]=\mathrm{v}_{\mathrm{V}}(\mathrm{x}+\mathrm{y}) \leq \max \left\{\mathrm{v}_{\mathrm{V}}(\mathrm{x}), \mathrm{v}_{\mathrm{v}}(\mathrm{y})\right\}=\max \left\{\mathrm{v}_{\mathrm{V}}\left(\mathrm{x}_{1}\right.\right.$, $\left.\left.x_{2}\right), v_{V}\left(y_{1}, y_{2}\right)\right\}=\max \left\{\max \left\{v_{A}\left(x_{1}\right), v_{A}\left(x_{2}\right)\right\}, \max \left\{v_{A}\left(y_{1}\right), v_{A}\left(y_{2}\right)\right.\right.$ \} \}. If $v_{A}\left(x_{1}+y_{1}\right) \geq v_{A}\left(x_{2}+y_{2}\right), v_{A}\left(x_{1}\right) \geq v_{A}\left(x_{2}\right), v_{A}\left(y_{1}\right) \geq v_{A}\left(y_{2}\right)$, we get, $v_{A}\left(x_{1}+y_{1}\right) \leq \max \left\{v_{A}\left(x_{1}\right), v_{A}\left(y_{1}\right)\right\}$, for all $x_{1}$ and $y_{1}$ in R. And, $\max \left\{v_{\mathrm{A}}\left(\mathrm{x}_{1} \mathrm{y}_{1}\right), v_{\mathrm{A}}\left(\mathrm{x}_{2} \mathrm{y}_{2}\right)\right\}=\mathrm{v}_{\mathrm{V}}\left(\mathrm{x}_{1} \mathrm{y}_{1}, \mathrm{x}_{2} \mathrm{y}_{2}\right)=\mathrm{v}_{\mathrm{v}}\left[\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right)\left(\mathrm{y}_{1}\right.\right.$, $\left.\left.\mathrm{y}_{2}\right)\right]=v_{\mathrm{V}}(\mathrm{xy}) \leq \max \left\{\mathrm{v}_{\mathrm{V}}(\mathrm{x}), v_{\mathrm{v}}(\mathrm{y})\right\}=\max \left\{\mathrm{v}_{\mathrm{V}}\left(\mathrm{x}_{1}, \mathrm{x}_{2}\right), v_{\mathrm{V}}\left(\mathrm{y}_{1}\right.\right.$, $\left.\left.\mathrm{y}_{2}\right)\right\}=\max \left\{\max \left\{\mathrm{v}_{\mathrm{A}}\left(\mathrm{x}_{1}\right), \mathrm{v}_{\mathrm{A}}\left(\mathrm{x}_{2}\right)\right\}, \max \left\{\mathrm{v}_{\mathrm{A}}\left(\mathrm{y}_{1}\right), \mathrm{v}_{\mathrm{A}}\left(\mathrm{y}_{2}\right)\right\}\right\}$. If $v_{A}\left(x_{1} y_{1}\right) \geq v_{A}\left(x_{2} y_{2}\right), v_{A}\left(x_{1}\right) \geq v_{A}\left(x_{2}\right), v_{A}\left(y_{1}\right) \geq v_{A}\left(y_{2}\right)$, we get $v_{A}\left(x_{1} y_{1}\right) \leq \max \left\{v_{A}\left(x_{1}\right), v_{A}\left(y_{1}\right)\right\}$, for all $x_{1}$ and $y_{1}$ in $R$.
Therefore A is an intuitionistic fuzzy subsemiring of R .
2.5 Theorem: If $A$ is an intuitionistic fuzzy subsemiring of a semiring ( $R,+, \cdot$ ), then $H=\left\{x / x \in R: \mu_{A}(x)=1, v_{A}(x)=0\right\}$ is either empty or is a subsemiring of $R$.
Proof: If no element satisfies this condition, then $H$ is empty. If $x$ and $y$ in $H$, then $\mu_{A}(x+y) \geq \min \left\{\mu_{A}(x), \mu_{A}(y)\right\}=\min \{1,1\}$ $=1$. Therefore, $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y})=1$. And $\mu_{\mathrm{A}}(\mathrm{xy}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x})\right.$, $\left.\mu_{\mathrm{A}}(\mathrm{y})\right\}=\min \{1,1\}=1$. Therefore, $\mu_{\mathrm{A}}(\mathrm{xy})=1$. Now, $v_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \leq$ $\max \left\{v_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{A}}(\mathrm{y})\right\}=\max \{0,0\}=0$. Therefore, $v_{\mathrm{A}}(\mathrm{x}+\mathrm{y})=$ 0 . And $v_{A}(x y) \leq \max \left\{v_{A}(x), v_{A}(y)\right\}=\max \{0,0\}=0$. Therefore, $v_{\mathrm{A}}(\mathrm{xy})=0$. We get $\mathrm{x}+\mathrm{y}$, xy in H . Therefore, H is a subsemiring of $R$. Hence $H$ is either empty or is a subsemiring of R.
2.6 Theorem: If A be an intuitionistic fuzzy subsemiring of a semiring $(R,+, \cdot)$, then
(i) if $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y})=0$, then either $\mu_{\mathrm{A}}(\mathrm{x})=0$ or $\mu_{\mathrm{A}}(\mathrm{y})=0$, for all x and $y$ in $R$.
(ii) if $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y})=1$, then either $\mu_{\mathrm{A}}(\mathrm{x})=1$ or $\mu_{\mathrm{A}}(\mathrm{y})=1$, for all x and y in R .
Proof: Let $x$ and $y$ in R. (i) By the definition $\mu_{\mathrm{A}}(\mathrm{x}-\mathrm{y}) \geq \min \{$ $\left.\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$,
which implies that $0 \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$. Therefore, either $\mu_{\mathrm{A}}(\mathrm{x})=0$ or $\mu_{\mathrm{A}}(\mathrm{y})=0$.
(ii) By the definition $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \leq \max \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$, which implies that $1 \leq \max \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$. Therefore, either $\mu_{\mathrm{A}}(\mathrm{x})=1$ or $\mu_{\mathrm{A}}(\mathrm{y})=1$.
2.7 Theorem: If $A$ is an intuitionistic fuzzy subsemiring of a semiring ( $R,+, \cdot$ ), then $H=\left\{\left\langle x, \mu_{A}(x)\right\rangle: 0<\mu_{A}(x) \leq 1\right.$ and $\left.v_{A}(x)=0\right\}$ is either empty or a fuzzy subsemiring of $R$.

Proof: If no element satisfies this condition, then H is empty. If x and y satisfies this condition, then $v_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \leq \max \left\{v_{\mathrm{A}}(\mathrm{x})\right.$, $\left.v_{A}(y)\right\}=\max \{0,0\}=0$. Therefore, $v_{A}(x+y)=0$, for all $x$ and $y$ in R. And, $v_{A}(x y) \leq \max \left\{v_{A}(x), v_{A}(y)\right\}=\max \{0,0\}=0$. Therefore, $v_{A}(x y)=0$, for all $x$ and $y$ in R. And, $\mu_{A}(x+y) \geq \min$ $\left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$. Therefore, $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$, for all $x$ and $y$ in R. And, $\mu_{A}(x y) \geq \min \left\{\mu_{A}(x), \mu_{A}(y)\right\}$. Therefore, $\mu_{\mathrm{A}}(\mathrm{xy}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$, for all x and y in R . Hence $H$ is a fuzzy subsemiring of $R$. Therefore, $H$ is either empty or a fuzzy subsemiring of R.
2.8 Theorem: If $A$ is an intuitionistic fuzzy subsemiring of a semiring ( $\mathrm{R},+, \cdot$ ) then $\mathrm{H}=\left\{\left\langle\mathrm{x}, \mu_{\mathrm{A}}(\mathrm{x})\right\rangle: 0<\mu_{\mathrm{A}}(\mathrm{x}) \leq 1\right\}$ is either empty or a fuzzy subsemiring of $R$.
Proof: If no element satisfies this condition, then H is empty. If $x$ and $y$ satisfies this condition, then $\mu_{A}(x+y) \geq \min \left\{\mu_{A}(x), \mu_{A}(y)\right\}$. Therefore, $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$, for all x and y in R . And $\mu_{\mathrm{A}}(\mathrm{xy}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$. Therefore, $\mu_{\mathrm{A}}(\mathrm{xy}) \geq \min \{$ $\left.\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$, for all x and y in R . Therefore, H is either empty or a fuzzy subsemiring of $R$.
2.9 Theorem: If $A$ is an intuitionistic fuzzy subsemiring of a semiring $(R,+, \cdot)$, then $H=\left\{\left\langle x, v_{A}(x)\right\rangle: 0<v_{A}(x) \leq 1\right\}$ is either empty or an anti-fuzzy subsemiring of $R$.
Proof: If no element satisfies this condition, then H is empty. If $x$ and $y$ satisfies this condition, then $v_{A}(x+y) \leq$ $\max \left\{v_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{A}}(\mathrm{y})\right\}$. Therefore, $v_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \leq \max \left\{v_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{A}}(\mathrm{y})\right\}$, for all $x$ and $y$ in R. And $v_{A}(x y) \leq \max \left\{v_{A}(x), v_{A}(y)\right\}$. Therefore, $v_{A}(x y) \leq \max \left\{v_{A}(x), v_{A}(y)\right\}$, for all $x$ and $y$ in $R$. Hence H is either empty or an anti-fuzzy subsemiring of R .
2.10 Theorem: If A is an intuitionistic fuzzy subsemiring of a semiring ( $R,+, \cdot$ ), then $\square A$ is an intuitionistic fuzzy subsemiring of R.
Proof: Let $A$ be an intuitionistic fuzzy subsemiring of a semiring R. Consider $A=\left\{\left\langle x, \mu_{A}(x), v_{A}(x)\right\rangle\right\}$, for all $x$ in $R$, we take $\square \mathrm{A}=\mathrm{B}=\left\{\left\langle\mathrm{x}, \mu_{\mathrm{B}}(\mathrm{x}), \nu_{\mathrm{B}}(\mathrm{x})\right\rangle\right\}$, where $\mu_{\mathrm{B}}(\mathrm{x})=\mu_{\mathrm{A}}(\mathrm{x})$, $v_{B}(x)=1-\mu_{A}(x)$. Clearly, $\mu_{B}(x+y) \geq \min \left\{\mu_{B}(x), \mu_{B}(y)\right\}$, for all $x$ and $y$ in $R$ and $\mu_{B}(x y) \geq \min \left\{\mu_{B}(x), \mu_{B}(y)\right\}$, for all $x$ and $y$ in $R$. Since $A$ is an intuitionistic fuzzy subsemiring of $R$, we have $\mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}$, for all x and y in R , which implies that $1-v_{B}(x+y) \geq \min \left\{\left(1-v_{B}(x)\right),\left(1-v_{B}(y)\right)\right\}$, which implies that $v_{B}(x+y) \leq 1-\min \left\{\left(1-v_{B}(x)\right),\left(1-v_{B}(y)\right)\right\}=$ $\max \left\{v_{B}(x), v_{B}(y)\right\}$. Therefore, $v_{B}(x+y) \leq \max \left\{v_{B}(x), v_{B}(y)\right\}$, for all $x$ and $y$ in R. And $\mu_{A}(x y) \geq \min \left\{\mu_{A}(x), \mu_{A}(y)\right\}$, for all $x$ and $y$ in $R$, which implies that $1-v_{B}(x y) \geq \min \left\{\left(1-v_{B}(x)\right)\right.$, (1$\left.\left.v_{B}(y)\right)\right\}$ which implies that $v_{B}(x y) \leq 1-\min \left\{\left(1-v_{B}(x)\right)\right.$, ( $1-$ $\left.\left.v_{B}(y)\right)\right\}=\max \left\{v_{B}(x), v_{B}(y)\right\}$. Therefore, $v_{B}(x y) \leq \max \{$ $\left.v_{B}(x), v_{B}(y)\right\}$, for all $x$ and $y$ in R. Hence $B=\square A$ is an intuitionistic fuzzy subsemiring of a semiring $R$.
Remark: The converse of the above theorem is not true. It is shown by the following example:

Consider the semiring $\mathrm{Z}_{5}=\{0,1,2,3,4\}$ with addition modulo 5 and multiplication modulo 5 operations. Then $\mathrm{A}=\{\langle$ $0,0.7,0.2\rangle,\langle 1,0.5,0.1\rangle,\langle 2,0.5,0.4\rangle,\langle 3,0.5,0.1\rangle,\langle 4,0.5,0.4\rangle$ $\}$ is not an intuitionistic fuzzy subsemiring of $Z_{5}$, but $\square \mathrm{A}=\{\langle 0$, $0.7,0.3\rangle,\langle 1,0.5,0.5\rangle,\langle 2,0.5,0.5\rangle,\langle 3,0.5,0.5\rangle,\langle 4,0.5,0.5\rangle\}$ is an intuitionistic fuzzy subsemiring of $Z_{5}$.
2.11 Theorem: If $A$ is an intuitionistic fuzzy subsemiring of a semiring ( $R,+, \cdot$ ), then $\diamond A$ is an intuitionistic fuzzy subsemiring of R.
Proof: Let $A$ be an intuitionistic fuzzy subsemiring of a semiring R. That is $A=\left\{\left\langle x, \mu_{A}(x), v_{A}(x)\right\rangle\right\}$, for all $x$ in $R$. Let
$\diamond \mathrm{A}=\mathrm{B}=\left\{\left\langle\mathrm{x}, \mu_{\mathrm{B}}(\mathrm{x}), \nu_{\mathrm{B}}(\mathrm{x})\right\rangle\right\}$, where $\mu_{\mathrm{B}}(\mathrm{x})=1-\nu_{\mathrm{A}}(\mathrm{x}), \nu_{\mathrm{B}}(\mathrm{x})=$ $v_{A}(x)$. Clearly, $v_{B}(x+y) \leq \max \left\{v_{B}(x), v_{B}(y)\right\}$, for all $x$ and $y$ in $R$ and $\nu_{B}(x y) \leq \max \left\{\nu_{B}(x), \nu_{B}(y)\right\}$, for all $x$ and $y$ in R. Since $A$ is an intuitionistic fuzzy subsemiring of $R$, we have $v_{A}(x+y) \leq$ $\max \left\{v_{A}(x), v_{A}(y)\right\}$, for all $x$ and $y$ in $R$, which implies that $1-$ $\mu_{\mathrm{B}}(\mathrm{x}+\mathrm{y}) \leq \max \left\{\left(1-\mu_{\mathrm{B}}(\mathrm{x})\right),\left(1-\mu_{\mathrm{B}}(\mathrm{y})\right)\right\}$, which implies that $\mu_{\mathrm{B}}(\mathrm{x}+\mathrm{y}) \geq 1-\max \left\{\left(1-\mu_{\mathrm{B}}(\mathrm{x})\right),\left(1-\mu_{\mathrm{B}}(\mathrm{y})\right)\right\}=\min \left\{\mu_{\mathrm{B}}(\mathrm{x})\right.$, $\left.\mu_{\mathrm{B}}(\mathrm{y})\right\}$. Therefore, $\mu_{\mathrm{B}}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\mu_{\mathrm{B}}(\mathrm{x}), \mu_{\mathrm{B}}(\mathrm{y})\right\}$, for all x and y in R. And $v_{A}(x y) \leq \max \left\{v_{A}(x), v_{A}(y)\right\}$, for all $x$ and $y$ in $R$, which implies that $1-\mu_{\mathrm{B}}(\mathrm{xy}) \leq \max \left\{\left(1-\mu_{\mathrm{B}}(\mathrm{x})\right),\left(1-\mu_{\mathrm{B}}(\mathrm{y})\right)\right\}$, which implies that $\mu_{\mathrm{B}}(\mathrm{xy}) \geq 1-\max \left\{\left(1-\mu_{\mathrm{B}}(\mathrm{x})\right),\left(1-\mu_{\mathrm{B}}(\mathrm{y})\right)\right\}=$ $\min \left\{\mu_{B}(x), \mu_{B}(y)\right\}$. Therefore, $\mu_{B}(x y) \geq \min \left\{\mu_{B}(x), \mu_{B}(y)\right\}$, for all $x$ and $y$ in R. Hence $B=\diamond A$ is an intuitionistic fuzzy subsemiring of a semiring $R$.
Remark: The converse of the above theorem is not true. It is shown by the following example:
Consider the semiring $\mathrm{Z}_{5}=\{0,1,2,3,4\}$ with addition modulo 5 and multiplication modulo 5 operations. Then $\mathrm{A}=\{\langle 0,0.5$, $0.1\rangle,\langle 1,0.6,0.4\rangle,\langle 2,0.5,0.4\rangle,\langle 3,0.6,0.4\rangle,\langle 4,0.5,0.4\rangle\}$ is not an intuitionistic fuzzy subsemiring of $Z_{5}$, but $\quad \diamond \mathrm{A}=\{\langle 0,0.9$, $0.1\rangle,\langle 1,0.6,0.4\rangle,\langle 2,0.6,0.4\rangle,\langle 3,0.6,0.4\rangle,\langle 4,0.6,0.4\rangle\}$ is an intuitionistic fuzzy subsemiring of $\mathrm{Z}_{5}$.
2.12 Theorem: Let $(R,+,$.$) be a semiring and A$ be a non empty subset of R . Then A is a subsemiring of R if and only if B
$=<\chi_{A}, \chi_{A}>$ is an intuitionistic fuzzy subsemiring of R , where $\chi_{A}$ is the characteristic function.
Proof: Let (R, +, . ) be a semiring and A be a non empty subset of R. First let A be a subsemiring of R.Take $x$ and $y$ in R. Case (i): If $x$ and $y$ in $A$, then $x+y$, $x y$ in A, since $A$ is a subsemiring of $\mathrm{R}, \chi_{A}(\mathrm{x})=\chi_{A}(\mathrm{y})=\chi_{A}(\mathrm{x}+\mathrm{y})=\chi_{A}(\mathrm{xy})=1$ and $\chi_{A}(\mathrm{x})$ $=\overline{\chi_{A}}(\mathrm{y})=\overline{\chi_{A}}(\mathrm{x}+\mathrm{y})=\overline{\chi_{A}}(\mathrm{xy})=0$. So, $\quad \chi_{A}(\mathrm{x}+\mathrm{y}) \geq \min$ $\left\{\chi_{A}(\mathrm{x}), \quad \chi_{A}(\mathrm{y}) \quad\right\}$, for all x and y in R , $\chi_{A}(\mathrm{xy}) \geq \min \left\{\chi_{A}(\mathrm{x}), \chi_{A}(\mathrm{y})\right\}$, for all x and y in R. So, $\chi_{A}(\mathrm{x}+\mathrm{y}) \leq \max \left\{\chi_{A}(\mathrm{x}), \chi_{A}(\mathrm{y})\right\}$, for all x and y in R , $\overline{\chi_{A}}(\mathrm{xy}) \leq \max \left\{\overline{\chi_{A}}(\mathrm{x}), \overline{\chi_{A}}\right.$ (y) $\}$, for all x and y in R .
Case (ii): If x in $\mathrm{A}, \mathrm{y}$ not in A ( or x not in $\mathrm{A}, \mathrm{y}$ in A ), then $\mathrm{x}+\mathrm{y}$, xy may or may not be in $\mathrm{A}, \chi_{A}(\mathrm{x})=1, \chi_{A}(\mathrm{y})=0$ (or $\chi_{A}(\mathrm{x})$ $\left.=0, \chi_{A}(\mathrm{y})=1\right), \chi_{A}(\mathrm{x}+\mathrm{y})=\chi_{A}(\mathrm{xy})=1$ (or 0 ) and $\overline{\chi_{A}}(\mathrm{x})=$ $0, \overline{\chi_{A}}(\mathrm{y})=1\left(\right.$ or $\left.\overline{\chi_{A}}(\mathrm{x})=1, \overline{\chi_{A}}(\mathrm{y})=0\right), \overline{\chi_{A}}(\mathrm{x}+\mathrm{y})=\overline{\chi_{A}}(\mathrm{xy})=$ 0 ( or 1 ). Clearly $\chi_{A}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\chi_{A}(\mathrm{x}), \chi_{A}(\mathrm{y})\right\}$, for all x and y in $\mathrm{R}, \chi_{A}(\mathrm{xy}) \geq \min \left\{\chi_{A}(\mathrm{x}), \chi_{A}(\mathrm{y})\right\}$, for all x and y in R , and $\overline{\chi_{A}}(\mathrm{x}+\mathrm{y}) \leq \max \left\{\overline{\chi_{A}}(\mathrm{x}), \overline{\chi_{A}}(\mathrm{y})\right\}$, for all x and y in R . $\overline{\chi_{A}}(\mathrm{xy}) \leq \max \left\{\overline{\chi_{A}}(\mathrm{x}), \overline{\chi_{A}}(\mathrm{y})\right\}$, for all x and y in R .
Case (iii): If x and y not in A, then $\mathrm{x}+\mathrm{y}$, xy may or may not be in $\mathrm{A}, \chi_{A}(\mathrm{x})=\chi_{A}(\mathrm{y})=0, \chi_{A}(\mathrm{x}+\mathrm{y})=\chi_{A}(\mathrm{xy})=1$ or 0 and $\overline{\chi_{A}}(\mathrm{x})$ $=\chi_{A}(\mathrm{y})=1, \quad \chi_{A}(\mathrm{x}+\mathrm{y})=\chi_{A}(\mathrm{xy})=0$ or 1. Clearly $\chi_{A}(\mathrm{x}+\mathrm{y}) \geq$ $\min \left\{\chi_{A}(\mathrm{x}), \chi_{A}(\mathrm{y})\right\}$, for all x and y in R and $\chi_{A}(\mathrm{xy}) \geq \min$ $\left\{\chi_{A}(\mathrm{x}), \chi_{A}(\mathrm{y})\right\}$, for all x and y in R , and $\overline{\chi_{A}}(\mathrm{x}+\mathrm{y}) \leq \max$ $\left\{\overline{\chi_{A}}(\mathrm{x}), \overline{\chi_{A}}(\mathrm{y})\right\}$, for all x and y in $\mathrm{R} \overline{\chi_{A}}(\mathrm{xy}) \leq \max \left\{\overline{\chi_{A}}\right.$
(x), $\overline{\chi_{A}}$ (y) \}, for all x and y in R. So in all the three cases, we have $B$ is an intuitionistic fuzzy subsemiring of a semiring $R$. Conversely, let x and y in A , since A is a non empty subset of R , so, $\chi_{A}(\mathrm{x})=\chi_{A}(\mathrm{y})=1, \bar{\chi}_{A}(\mathrm{x})=\bar{\chi}_{A}(\mathrm{y})=0$. Since $\mathrm{B}=$ $<\chi_{A}, \chi_{A}>$ is an intuitionistic fuzzy subsemiring of R , we have $\chi_{A}(\mathrm{x}+\mathrm{y}) \geq \min \left\{\chi_{A}(\mathrm{x}), \chi_{A}(\mathrm{y})\right\}=\min \{1,1\}=$ $1, \chi_{A}(\mathrm{xy}) \geq \min \left\{\chi_{A}(\mathrm{x}), \chi_{A}(\mathrm{y}) \quad\right\}=\min \{1,1\}=1$. Therefore $\chi_{A}(\mathrm{x}+\mathrm{y})=\chi_{A}(\mathrm{xy})=1$. And, $\overline{\chi_{A}}(\mathrm{x}+\mathrm{y}) \leq \max \left\{\overline{\chi_{A}}(\mathrm{x}), \overline{\chi_{A}}(\mathrm{y})\right.$ $\}=\max \{0,0\}=0, \overline{\chi_{A}}(\mathrm{xy}) \leq \max \left\{\overline{\chi_{A}}(\mathrm{x}), \overline{\chi_{A}}(\mathrm{y})\right\}=\max \{$ $0,0\}=0$. Therefore $\chi_{A}(x+y)=\chi_{A}(x y)=0$. Hence $x+y$ and $x y$ in $A$, so $A$ is a subsemiring of $R$.
In the following Theorem $\circ$ is the composition operation of functions:
2.13 Theorem: Let A be an intuitionistic fuzzy subsemiring of a semiring H and f is an isomorphism from a semiring R onto H . Then $A \circ f$ is an intuitionistic fuzzy subsemiring of $R$.
Proof: Let x and y in R and A be an intuitionistic fuzzy subsemiring of a semiring H .
Then we have, $\left.\mu_{\mathrm{A}}{ }^{\circ} \mathrm{f}\right)(\mathrm{x}+\mathrm{y})=\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{x}+\mathrm{y}))=\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{x})+\mathrm{f}(\mathrm{y})) \geq \min \{$ $\left.\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{x})), \mu_{\mathrm{A}}(\mathrm{f}(\mathrm{y}))\right\} \geq \min \left\{\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}),\left(\mu_{\mathrm{A}}{ }^{\circ} \mathrm{f}\right)(\mathrm{y})\right\}$, which implies that $\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}+\mathrm{y}) \geq \min \left\{\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}),\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$. And $\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{xy})=$ $\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{xy}))=\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{x}) \mathrm{f}(\mathrm{y})) \geq \min \left\{\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{x})), \mu_{\mathrm{A}}(\mathrm{f}(\mathrm{y}))\right\} \geq$ $\min \left\{\left(\mu_{\mathrm{A}} \circ \mathrm{f} \quad\right)(\mathrm{x}),\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$, which implies that $\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right.$ $)(x y) \geq \min \left\{\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(x),\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(y)\right\}$. Then we have, $\left(v_{\mathrm{A}} \circ \mathrm{f}\right.$ $)(\mathrm{x}+\mathrm{y})=v_{\mathrm{A}}(\mathrm{f}(\mathrm{x}+\mathrm{y}))=v_{\mathrm{A}}(\mathrm{f}(\mathrm{x})+\mathrm{f}(\mathrm{y})) \leq \max \left\{v_{\mathrm{A}}(\mathrm{f}(\mathrm{x})), v_{\mathrm{A}}(\mathrm{f}(\mathrm{y}))\right\} \leq$ $\max \left\{\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}),\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$, which implies that $\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}+\mathrm{y}) \leq$ $\max \left\{\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}),\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$. $\operatorname{And}\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{xy})=v_{\mathrm{A}}(\mathrm{f}(\mathrm{xy}))=$ $v_{A}(f(x) f(y)) \leq \max \left\{v_{A}(f(x)), v_{A}(f(y))\right\} \leq \max \left\{\left(v_{A}{ }^{\circ} f\right)(x)\right.$, $\left.\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$, which implies that $\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{xy}) \leq \max \left\{\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x})\right.$, $\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})$ \}. Therefore ( $\left.\mathrm{A} \circ \mathrm{f}\right)$ is an intuitionistic fuzzy subsemiring of a semiring R.
2.14 Theorem: Let A be an intuitionistic fuzzy subsemiring of a semiring H and f is an anti-isomorphism from a semiring R onto $H$. Then $A \circ f$ is an intuitionistic fuzzy subsemiring of $R$.
Proof: Let x and y in R and A be an intuitionistic fuzzy subsemiring of a semiring H .
Then we have, $\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}+\mathrm{y})=\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{x}+\mathrm{y}))=\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{y})+\mathrm{f}(\mathrm{x})) \geq$ $\min \left\{\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{x})), \quad \mu_{\mathrm{A}}(\mathrm{f}(\mathrm{y}))\right\} \geq \min \left\{\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}),\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$, which implies that $\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(x+y) \geq \min \quad\left\{\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}),\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right.$ $\} .\left(\mu_{A^{\circ}} \circ f\right)(x y)=\mu_{A}(f(x y))=\mu_{A}(f(y) f(x)) \geq \min \left\{\mu_{A}(f(x))\right.$, $\left.\mu_{\mathrm{A}}(\mathrm{f}(\mathrm{y}))\right\} \geq \min \left\{\left(\mu_{\mathrm{A}}{ }^{\circ} \mathrm{f}\right)(\mathrm{x}),\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$, which implies that $($ $\left.\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{xy}) \geq \min \left\{\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x}),\left(\mu_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$. Then we have, $\left(v_{\mathrm{A}} \circ \mathrm{f}\right)($ $x+y)=v_{A}(f(x+y))=v_{A}(f(y)+f(x)) \leq \max \left\{v_{A}(f(x)), v_{A}(f(y)\right.$ $)\} \leq \max \left\{\left(v_{\mathrm{A}} \circ f\right)(x),\left(v_{\mathrm{A}} \circ f\right)(\mathrm{y})\right\}$, which implies that $\left(v_{\mathrm{A}} \circ f\right)($ $x+y) \leq \max \left\{\left(v_{A} \circ f\right)(x),\left(v_{A} \circ f\right)(y)\right\} .\left(v_{A} \circ f\right)(x y)=v_{A}(f(x y))=$ $v_{A}(f(y) f(x)) \leq \max \left\{v_{A}(f(x)), v_{A}(f(y))\right\} \leq \max \left\{\left(v_{A}{ }^{\circ} f\right)(x)\right.$, $\left.\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$, which implies that $\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{xy}) \leq \max \left\{\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{x})\right.$, $\left.\left(v_{\mathrm{A}} \circ \mathrm{f}\right)(\mathrm{y})\right\}$. Therefore $\mathrm{A} \circ \mathrm{f}$ is an intuitionistic fuzzy subsemiring of a semiring $R$.
2.15 Theorem: Let A be an intuitionistic fuzzy subsemiring of a semiring ( $\mathrm{R},+$, . ), then the pseudo intuitionistic fuzzy coset $(\mathrm{aA})^{\mathrm{p}}$ is an intuitionistic fuzzy subsemiring of a semiring $R$, for every a in R.
Proof: Let $A$ be an intuitionistic fuzzy subsemiring of a semiring R. For every $x$ and $y$ in R, we have, $\left(\left(a \mu_{A}\right)^{p}\right)(x+y)=$ $\mathrm{p}(\mathrm{a}) \mu_{\mathrm{A}}(\mathrm{x}+\mathrm{y}) \geq \mathrm{p}(\mathrm{a}) \min \left\{\left(\mu_{\mathrm{A}}(\mathrm{x}), \mu_{\mathrm{A}}(\mathrm{y})\right\}=\min \left\{\mathrm{p}(\mathrm{a}) \mu_{\mathrm{A}}(\mathrm{x})\right.\right.$,
$\left.\mathrm{p}(\mathrm{a}) \mu_{\mathrm{A}}(\mathrm{y})\right\}=\min \left\{\left(\left(\mathrm{a} \mu_{\mathrm{A}}\right)^{\mathrm{p}}\right)(\mathrm{x}),\left(\left(\mathrm{a} \mu_{\mathrm{A}}\right)^{\mathrm{p}}\right)(\mathrm{y})\right\}$. Therefore, $\left(\left(a \mu_{A}\right)^{p}\right)(x+y) \geq \min \left\{\left(\left(a \mu_{A}\right)^{p}\right)(x),\left(\left(a \mu_{A}\right)^{p}\right)(y)\right\}$. Now, $\left(\left(a \mu_{A}\right)^{p}\right)(x y$ $)=p(a) \mu_{A}(x y) \geq p(a) \min \left\{\mu_{A}(x), \mu_{A}(y)\right\}=\min \left\{p(a) \mu_{A}(x)\right.$, $\left.p(a) \mu_{A}(y)\right\}=\min \left\{\left(\left(a \mu_{A}\right)^{p}\right)(x),\left(\left(a \mu_{A}\right)^{p}\right)(y)\right\}$. Therefore, $\left(\left(a \mu_{A}\right)^{p}\right.$ $)(x y) \geq \min \left\{\left(\left(a \mu_{A}\right)^{p}\right)(x),\left(\left(a \mu_{A}\right)^{p}\right)(y)\right\}$. For every $x$ and $y$ in R, we have, $\quad\left(\left(a v_{A}\right)^{p}\right)(x+y)=p(a) v_{A}(x+y) \leq$ $\mathrm{p}(\mathrm{a}) \max \left\{\left(\mathrm{v}_{\mathrm{A}}(\mathrm{x}), v_{\mathrm{A}}(\mathrm{y})\right\}=\max \left\{\mathrm{p}(\mathrm{a}) \mathrm{v}_{\mathrm{A}}(\mathrm{x}), \mathrm{p}(\mathrm{a}) \mathrm{v}_{\mathrm{A}}(\mathrm{y})\right\}=\max \{(\right.$ $\left.\left.\left(a v_{A}\right)^{p}\right)(x),\left(\left(a v_{A}\right)^{p}\right)(y)\right\}$. Therefore, $\left(\left(a v_{A}\right)^{p}\right)(x+y) \leq \max \{($ $\left.\left.\left(a v_{A}\right)^{p}\right)(x),\left(\left(a v_{A}\right)^{p}\right)(y)\right\}$. Now, $\left(\left(a v_{A}\right)^{p}\right)(x y)=p(a) v_{A}(x y) \leq$ $\mathrm{p}(\mathrm{a}) \max \left\{\mathrm{v}_{\mathrm{A}}(\mathrm{x}), \quad v_{\mathrm{A}}(\mathrm{y})\right\}=\max \left\{\mathrm{p}(\mathrm{a}) v_{\mathrm{A}}(\mathrm{x}), \quad \mathrm{p}(\mathrm{a}) \mathrm{v}_{\mathrm{A}}(\mathrm{y})\right\}=\max \{\quad($ $\left.\left.\left(a v_{A}\right)^{p}\right)(x),\left(\left(a v_{A}\right)^{p}\right)(y)\right\}$. Therefore, $\left(\left(a v_{A}\right)^{p}\right)(x y) \leq \max \{($ $\left.\left.\left(a v_{A}\right)^{p}\right)(x),\left(\left(a v_{A}\right)^{p}\right)(y)\right\}$. Hence $(a A)^{p}$ is an intuitionistic fuzzy subsemiring of a semiring $R$.
